

[ABSTRACT]

One aspect of the present invention provides: a curable resin composition from which a cured product with excellent reliability at low temperatures can be obtained; a
5 cured product and a lens with excellent reliability at low temperatures; and a substrate-attached lens comprising the lens.

The curable resin composition according to one aspect of the present invention comprises a diglycidyl ether compound having a bisphenol skeleton, a bifunctional alicyclic epoxy compound (excluding the diglycidyl ether compound), and a trifunctional
10 or higher polyfunctional epoxy compound having an isocyanurate ring structure. The content of the diglycidyl ether compound is 30% by mass or more and the content of the polyfunctional epoxy compound is 20% by mass or less with respect to the total mass of resin components in the curable resin composition.

The cured product is one obtained by curing the curable resin composition of the
15 present invention.

The lens comprises a cured product of the curable resin composition of the present invention.

The substrate-attached lens comprises a substrate and the lens provided on the substrate.
