

ABSTRACT

AUXILIARY INFORMATION PROCESSING METHOD, AUXILIARY INFORMATION SENDING METHOD, AND RELATED DEVICE

This application discloses an assistance information processing method, an assistance information sending method, and a related device, and pertains to the field of communication technologies. The method includes: receiving physical cell identifier PCI range information, where the PCI range information includes a PCI range and network information corresponding to the PCI range; and determining, based on the network information, a network corresponding to the PCI range; where the network information includes a network index or a network identifier.
