ABSTRACT OF THE DISCLOSURE

A cleaning sheet which comprises a cleaning layer having a tensile stress at 10% strain of from 0.3 to 3,000 N/mm^2 or a carrying member with a cleaning function wherein at least one side of the carrying member has a cleaning layer having a tensile stress at 10% strain of from 0.3 to 3,000 N/mm^2, particularly, a cleaning sheet or a carrying member with a cleaning function of the aforementioned constructions, wherein the aforementioned cleaning layer comprises a resin layer having been hardened by an active energy source or a polymer resin having heat resistance.
