

Features:

1. Breaks down into three separate units for easy deployment.
2. Tower provides automated movements enabling 2D scanning.
3. Static interrogation using only SU and EU in confined spaces.

9/12

pushing the Brake Paddle down into the EU's front curvature (not shown), prevents slippage out of the Deployed condition, the tires are rotationally locked as well.

Fig. 15

EU in the Deployed condition, with the Brake Paddle in the "Up/Unlocked" position.

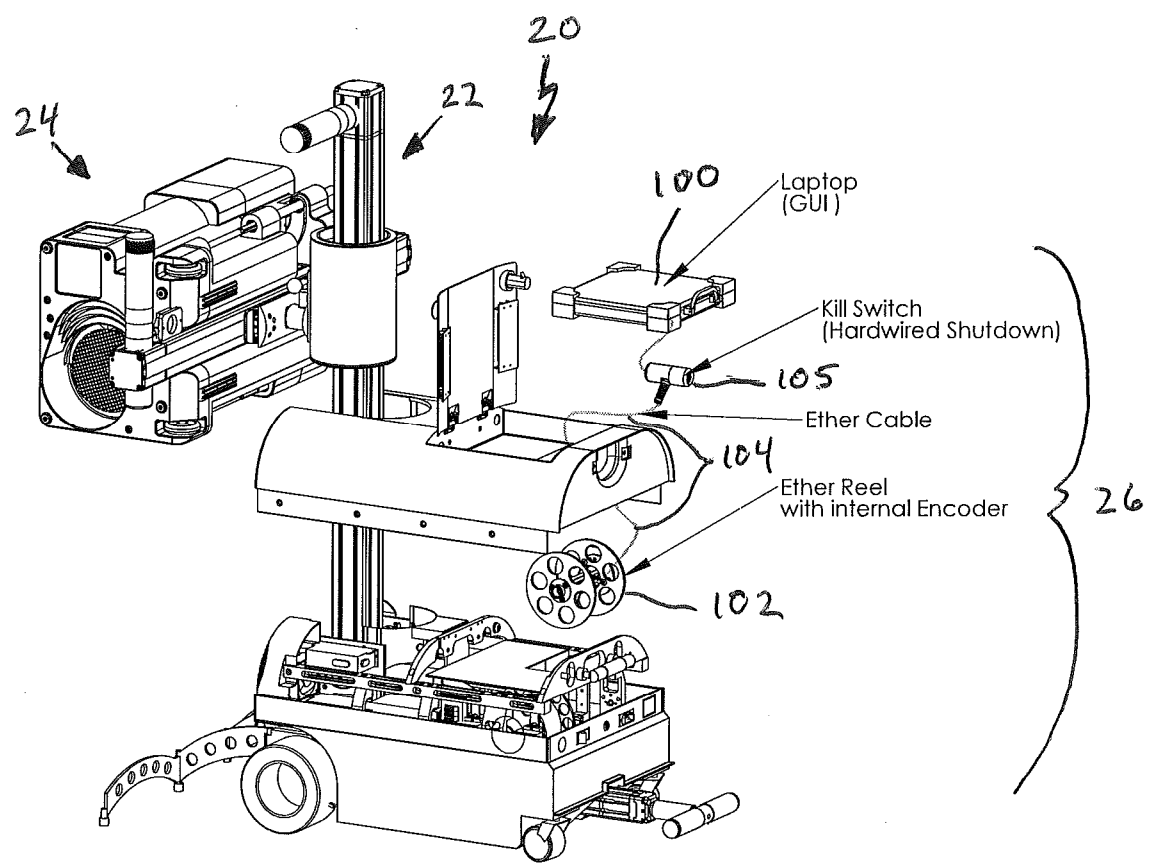

Fig. 16

The GIA is able to address tight confines with two rotational axis points: The Tower and the Riser Swivel Plate (under the SU and on top of the EA).
