(54) Title: VAGINAL DOUCHING AND/OR ENTEROCLYSM DEVICE

(57) Abstract

A vaginal douching and/or enteroclysm device including a grip holder for being held by a user's hand, a cannula connected to the grip holder, a liquid container for containing liquids, and an electric pump arranged for delivering fluid from the liquid holder to the cannula. The electric pump is selectively activated by means of a switch carried by the grip holder and actuatable when engaged by the user's hand. The electric pump may be completely arranged inside the grip holder, which may also contain a rechargeable battery for operating the electric pump, and which may further support the liquid container, while a base is provided for removably supporting the grip holder such that the grip holder is completely removable from said base. Alternatively the device may include a box for containing the electric pump and for supporting the liquid container and the grip holder, and a bendable liquid delivery tube interconnected between the grip holder and the electric pump.
