

ENGINEERING METHOD AND ESTABLISHING SYSTEM

ABSTRACT OF THE DISCLOSURE

5 An engineering method for establishing an engineering system includes
establishing the engineering system in a virtual system by performing a communication
and permitting an access to the virtual system via an internet, the communication being
performed by using a service which is provided via the internet, the service being used by
a first communication system which is connected to the internet, the virtual system being
10 disposed in the first communication system, and the virtual system virtually
implementing the engineering system, and inspecting the engineering system by
performing an access to an inspection system via a virtual private network, the access is
performed by a second communication system which is connected to the virtual private
network, the inspection system being disposed in the second communication system, and
15 the inspection system inspecting operations of the engineering system which is
established in the virtual system.
