PHARMACEUTICAL COMPOSITION FOR SOFT CONTACT LENS

Abstract

The objective of the present invention is to provide a pharmaceutical composition for a soft contact lens, wherein the composition comprises an alkyldiaminoethylglycine and adsorption of the alkyldiaminoethylglycine on a soft contact lens is suppressed. The pharmaceutical composition for a soft contact lens according to the present invention comprises 0.001 w/v% or more and 0.008 w/v% or less of an alkyldiaminoethylglycine hydrochloride and a metal chloride.
