ABSTRACT

ARYLOXY-AND HETEROARYLOXY-SUBSTITUTED TETRAHYDROBENZAZEPINES AND USE THEREOF TO BLOCK REUPTAKE OF NOREPINEPHRINE, DOPAMINE, AND SEROTONIN

The aryloxy- and heteroaryloxy-substituted tetrahydrobenzazepine derivative compounds of the present invention are represented by formulae (I) (A-E) having the following structure where the carbon atom designated * is in the R or S configuration and the substituents X and R^1-R^9 are as defined herein.

I(A-E)
