The device comprises a first arm and a second lever arm hinged to each other, the first arm comprises an aperture through which the dosage unit can be ejected. The lever arm comprises a protruding member for pressing out a dosage unit from the blister when the lever arm is lowered down onto the blister positioned on the first arm. The protruding member comprises a first section for applying a pressing force on the dosage unit inside the blister to initiate the breaking of the lid foil of the blister pack and a second section for distributing the pressing force over the dosage unit and for ejecting the dosage unit.
