(54) Title: AUTOMATED SECURED LOGIN FOR ROBOT PROCESS AUTOMATION APPLICATIONS

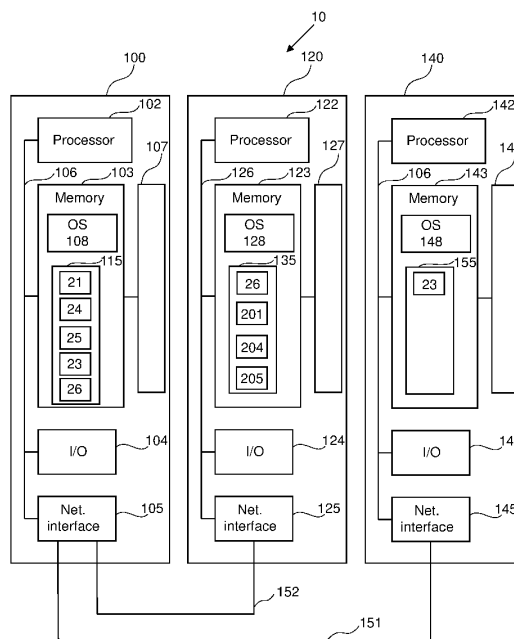

Fig. 2

(57) Abstract: The present disclosure includes execution of an application process on a first computer system, where the first computer system is arranged within a first security zone. Access credentials for the application process may be stored in a storage device, where the storage device is arranged within a second security zone. The application process may interact with a further application process. The further application process may be executed on a third computer system, where the further application process is controlled by a graphical user interface of the further application process. An application robot may be executed on the first computer system. The application robot may execute the application process. Further, a login into the first computer system from a second computer system may be executed for gaining access to the application process using the access credentials.
