

DEFLECTION YOKE LOCKING ARRANGEMENTABSTRACT

5 A liner of a deflection yoke is provided with non-threaded sleeves
100. A slide pin 115 is inserted into the sleeve until a head portion of the
pin comes in contact with a funnel of a cathode ray tube 140 on which the
yoke is mounted. After adjustment, a wedge 116 inserted in a hollow part
of the pin for expanding radially the wall of the pin. Thereby, the pin is
10 locked within the sleeve. In this way, the position of the yoke relative to
the tube is secured.
