

SEWING MACHINE FOR SEWING A WAISTBAND ON TROUSERS OR SKIRTS.

ABSTRACT

Sewing machine (100) for sewing fabrics, in particular a waistband (C) to an upper edge of a pair of trousers (L) or of a skirt; the sewing machine (100) comprises a worktop (P), two needles in side-by-side position and a puller device (8) disposed downstream said needles
5 (A), which acts as puller for said fabrics along the worktop (P), pressing said fabrics from above in order to frictionally pull them along the worktop (P); the peculiarity of the sewing machine (100) consists in the fact that it comprises a movable top surface (5) downstream and in aligned position with one of the two needles (A) and disposed under the
10 puller device (8); the movable top surface (5) can be disposed in a retracted position and an extracted position, in such a way to adjust the pulling speed of one side of the fabric that is sewn by the needle (A) in line with the movable top surface (5).
