METHOD FOR CONNECTING TO WI-FI HOTSPOT DEVICE, WI-FI HOTSPOT DEVICE, AND USER EQUIPMENT

ABSTRACT

Embodiments of the present invention provide a method for connecting to a Wi-Fi hotspot device, a Wi-Fi hotspot device, and user equipment. The method includes: generating, by a Wi-Fi hotspot device, a two-dimensional barcode according to Wi-Fi authentication information, where the two-dimensional barcode includes the Wi-Fi authentication information, and the Wi-Fi authentication information is used for authentication prior to connection to the Wi-Fi hotspot device; and presenting, by the Wi-Fi hotspot device, the two-dimensional barcode to UE by using a display screen of the Wi-Fi hotspot device. In the embodiments of the present invention, a Wi-Fi hotspot device generates a two-dimensional barcode that includes Wi-Fi authentication information, and presents the two-dimensional barcode to UE by using a display screen of the Wi-Fi hotspot device, so that the UE can connect to the Wi-Fi hotspot device according to the two-dimensional barcode, and a user does not need to memorize or record the Wi-Fi authentication information, thereby improving user experience.
