

A COUPLING SYSTEM

Abstract

Described herein is a coupling system comprising a first coupling, a second coupling, a first article and a second article. The first coupling comprises an anchor segment and an attachment segment. The first article defines an aperture for receiving the attachment segment of the first coupling with the anchor segment of the first coupling is shaped and dimensioned to abut the first article proximal the aperture thereof. The second coupling is coupled to the second article. When the first article is disposed adjacent the second article, the attachment segment of the first coupling is couplable to the second coupling to draw the anchor segment of the first coupling towards the second coupling to thereby couple the first article to the second article.
