

Use of an alkoxyated polytetrahydrofurane to reduce fuel consumption

Abstract

- 5 The use of an alkoxyated polytetrahydrofurane of formula

- 10 wherein m , m' , n , n' , p , p' and k are integers in the range of ≥ 1 , R^1 denotes an unsubstituted linear or branched alkyl radical, R^2 denotes $-\text{CH}_2-\text{CH}_3$, and R^3 denotes a hydrogen atom or $-\text{CH}_3$, as an additive in a fuel for reducing fuel consumption in the operation of an internal combustion engine with this fuel.
