ABSTRACT

PORTABLE STAMP

A portable stamp includes a housing (10) with an elongated slot (12). A handle (20) is movably mounted in the housing (10). A character unit (30) is pivotally mounted at the handle (20) with a first torsion spring (33). An ink pad (40) is pivotally mounted beneath the character unit (30) with a second torsion spring (43) and abuts a character plate (31) of the character unit (30). A control unit (50) is movably mounted in the elongated slot (12) and stably mounted in the handle (20). A cover (60) is detachably mounted at an open end of the housing (10). When the control unit (50) is pushed towards the open end, the character unit (30) and ink pad (40) are respectively pivoted under the forces of the torsion springs (33, 43) to positions perpendicular to the handle (20).
