ABSTRACT

"IMPROVEMENTS IN OR RELATING TO A MILLING INSERT AND A MILLING TOOL"

A cutting insert for use on a mill has a front face provided with a plurality of substantially parallel transversely extending projections. Each projection is of substantially triangular form in cross-section and presents an upper front face inclined relative to the plane of the rear face and a lower face substantially perpendicular to the plane of the rear face. Each projection defines an apex. The distance between adjacent apices is between 3.17 and 1.60 millimetres.
