(54) Title: GLUTAMINASE

(57) Abstract: The present invention refers to new a salt-resistant thermotolerant glutaminase from Lactobacilli. This glutaminase presents a salt dependence such that its activity in the presence of up to 15% NaCl is from 80 to 180 % of that without NaCl and a thermal stability such that its energy of activation is about 80 to 150 kJ.mol^{-1}. This enzyme may be obtained by cultivating a micro-organism belonging to the genus Lactobacillus, producing the salt-resistant thermotolerant glutaminase and then recovering it. The present glutaminase may be useful for enhancing the yield of production of glutamate in biohydrolysate manufacture process.
