(54) Title: TAMPER-EVIDENT OVERCAP**(57) Abstract**

A tamper-evident cap and overcap including a cap (12) with an upstanding cap portion and a lower base (22), the base defining a circumferential channel (20). An overcap (14) is positioned to enclose the upstanding cap portion, with the overcap carrying a circumferential projection of skirt (18) permanently retained in the circumferential channel, typically by force-fit. A frangible line of weakness (16) permits separation of the overcap and the circumferential projection. At least the circumferential projection, and typically also the overcap, are of a color that contrasts with the color of the cap, so that, upon removal of the cap, the remaining edge (26) of the circumferential projection gives an indication that the overcap has been removed.
