

ABSTRACT

The present invention provides a compound having a hematopoietic prostaglandin D synthase (H-PGDS) inhibitory activity and being useful for preventing or treating a disease involving the enzyme, and a pharmaceutical composition comprising the compound. Specifically, the present invention provides a compound represented by Formula (I) below or a pharmaceutically acceptable salt thereof:

[wherein -X= represents -CH= or the like; =Y- represents =CH- or the like; R¹ and R² each independently represent a hydrogen atom or the like; R³ represents a hydrogen atom or the like; and Z is a group represented by Formula (II):

(wherein the wavy line represents the point of attachment to the nitrogen atom; ring Z¹ represents a C₆₋₁₀ aryl group or the like; m represents 0, 1, or 2; and R⁴ represents a halogen atom or the like.)

or Formula (III):

(wherein the wavy line represents the point of attachment

to the nitrogen atom; ring Z^2 represents a C_{6-10} aryl group or the like; L represents a single bond or the like; ring Z^3 represents a C_{6-10} aryl group or the like; n represents 0, 1, or 2; and R^5 represents a halogen atom or the like.]
