

ABSTRACT

The present disclosure provides a video processing method and apparatus, a device, and a storage medium. The method comprises: when a target video is being played back, displaying a playback progress bar in a preset countdown mode that does not support the adjustment of a playback progress function; when detected that playback of the last frame of the target video has ended, stopping the playback of the target video; and on the basis of the last frame of the target video, displaying preset prompt information used for prompting that the target video only supports playback once. Hence, the embodiments of the present disclosure provide a video interaction means that only supports playback once, thereby enriching the means with which users are entertained on the basis of videos, and improving the user experience.
