(54) Title: ROLLING TOTE BAG

Fig. 2D

(57) Abstract: There is described a rolling tote bag (B) comprising a collapsible container body (10) made of a foldable assembly of fabric panels (11, 12, 15), including a bottom panel (15) and side panels (11, 12), that jointly define an inner storage volume when in an expanded state. The rolling tote bag (B) further comprises a rolling support assembly (S) to provide rolling support for the collapsible container body (10) in the expanded state, the rolling support assembly (S) including a support plate (P) and a plurality of caster wheels (W) provided on an underside of the support plate (P). The collapsible container body (10) further comprises a retaining structure formed of one or more fabric panels (21, 22, 31, 32), which retaining structure (21, 22, 31, 32) is provided underneath the bottom panel (15) and is configured to securely hold the support plate (P) outside of the inner storage volume against an underside of the bottom panel (15).
