

ABSTRACT

MOUNTING SYSTEM OF A PANEL AND CLIP OF THE SYSTEM

- 5 The present invention provides a mounting system for a panel, comprising: a clip, a sub-frame, a spacer and a resilient washer, wherein the clip and sub-frame are secured by a screw going through a round hole of the clip, the wing and a hole of the sub-frame. The mounting clip has the following characteristics: reducing the number of clips because clips may be used for both horizontal and vertical mountings of the ceramic panel; the clips are not exposed; the resilient contact between the clips and panels; panels are not vulnerable to come off; the clips can satisfy the separate mounting and removal for panels.
