(54) **Title:** OPENER DEVICE

(57) **Abstract:** Opener device for tearing and opening of a container, comprising - at least two blades (16A, 16B); - an elastic symmetrical outer frame (2) and inner elastic symmetrical frame (10), integrated with the at least two blades, said blades are positioned at specific locations along the inner elastic symmetrical frame; and at least two push buttons (12A, 12B) located at opposite locations along the inner symmetrical frame (10), wherein once pushing only one button the position of the at least two blades is unchanged due to imbalance of applied forces at the different areas and incase pushing simultaneously both buttons the force balance at all the different parts of the elastic symmetrical frame is maintained and the at least two blades are moved outwardly to an open position; - a casing (1) configured to enclose said inner and outer elastic symmetrical frames.
