

ABSTRACT OF THE DISCLOSURE

A work conveying path is provided in the longitudinal direction of a work on which balls are to be mounted. A ball supply tray for supplying balls and a mount head are disposed
5 so that their longitudinal directions substantially coincide with the longitudinal direction of the work. Further, a ball inspection unit for inspecting balls sucked on the mount head is disposed so that the projecting direction of inspection light from the ball inspection unit intersects the aforementioned
10 longitudinal directions substantially perpendicularly.
