

【ABSTRACT】

The present invention relates to an electronic device. The electronic device according to an embodiment of the present invention may comprise: a first housing; a second housing rotatably coupled to the first housing; a hinge that includes a first hinge arm connected to the first housing
5 and a second hinge arm connected to the second housing; a flexible display that is seated in the first housing and the second housing and spaced apart from each of the first hinge arm and the second hinge arm; a first plate that is disposed between the first hinge arm and the flexible display; and a second plate that is disposed between the second hinge arm and the flexible display and spaced apart from the first plate. The first plate may include a first edge portion having a first
10 inclined surface that is inclined relative to the direction in which the first hinge arm and the flexible display are spaced apart.
