

GAME SYSTEM

ABSTRACT

5

A purpose of the present invention is to provide a game system which can display on a table upper surface an image in accordance with a gaming chip placed on the table upper surface in a game system for performing a game using a physical gaming chip.

10

A game system (100) is a game system for performing a game using a gaming chip (9) and a playing card, and comprises: a table (1) including a table upper surface (11) including a display surface (111) configured to display an image; a camera (21, 23) configured to take a picture of the gaming chip (9) bet on the table upper surface (11) to generate a picture; a picture recognizing device (61) configured to analyze the picture and thereby recognize betting contents; a game judging device (3) configured to read contents of the playing card which is to be dealt on the table upper surface (11) to judge a game result; and an image control device (7) configured to display on the display surface (111) an image in accordance with the betting contents recognized by the picture recognizing device (61) and the game result judged by the game judging device (3).
