

ABSTRACT

A terminal device includes a signal reception unit
(41) that receives signals transmitted from a plurality of
transmission devices, and analyzes the contents of data
5 contained in the signals; and a control unit (42) that
performs control to select one transmission device from the
plurality of transmission devices that have transmitted
signals containing identical data, and causes the signal
reception unit to continuously receive a signal being
10 transmitted from the selected transmission device when the
number of received signals containing identical data is
equal to or larger than a prescribed number.
