

ENTRY FIELD EXTRACTION DEVICE AND ENTRY FIELD EXTRACTION PROGRAM

ABSTRACT

5 In an entry field extraction device (10), a learning unit (22) obtains a learning
model (31) by learning, from images (30) of a plurality of documents, features
corresponding to types of the documents. A feature field extraction unit (23) extracts,
from an image (40) of a document sample, a feature field (43) being a field indicating a
feature corresponding to a type of the document sample, using the learning model (31).
10 An entry field extraction unit (25) extracts an entry field (46), being a field of an entry
column, from a field that remains in the image (40) of the document sample from which
the feature field (43) extracted by the feature field extraction unit (23) has been
excluded.
