CLAIMS

1. A milk protein-containing granular composition comprising a milk protein and hydroxypropyl cellulose,

wherein an amount of the milk protein is 30 to 80 wt%,

the ratio by weight of the hydroxypropyl cellulose to the milk protein (hydroxypropyl cellulose/milk protein) in the granular composition is 0.01 to 0.07, and

the granular composition is a granular drink mix.

2. The granular composition according to claim 1,

wherein the milk protein is whey protein.

3. The granular composition according to claim 1 or 2,

wherein an amount of the hydroxypropyl cellulose is 1 to 5 wt%.

4. A method of producing a milk protein-containing granular composition, comprising

granulating milk protein-containing powder using a hydroxypropyl cellulose solution,

wherein an amount of the milk protein in the granular composition is 30 to 80 wt%,

the ratio by weight of the hydroxypropyl cellulose to the milk protein (hydroxypropyl cellulose/milk protein) in the granular composition is 0.01 to 0.07, and

the granular composition is a granular drink mix.

5. The production method according to claim 4,

wherein the milk protein is whey protein.

6. A method of improving dispersibility of a milk protein-containing granular composition, comprising

granulating milk protein-containing powder using a

hydroxypropyl cellulose solution in production of a milk protein-containing granular composition.

7. Use of hydroxypropyl cellulose for improving dispersibility of a milk protein-containing granular composition.
