

ABSTRACT

Embodiments of the disclosure relate to a method, an apparatus, a device for interface interaction, and a storage medium. The method proposed herein includes: presenting a playback interface of a target work, the playback interface including a target region where a navigation bar is displayed; and switching the target region to present a control panel in response to receiving a first preset operation for pausing playback of the target work, the control panel including at least one control associated with the target work. In this way, the embodiments of the disclosure can provide users with a quick control entry by reusing the navigation region in the paused playback state, thereby improving interaction efficiency.
