Abstract

[Abstract]

[Problem to be Solved]

A card shooter apparatus is provided.

[Solution]

A card shooter apparatus (1) in a table game system of the present invention includes a card shooter unit (4) including a card storage unit (2) that stores a plurality of cards (100) in a horizontal stack. A control device (5) constituted by a program storage unit, a computer device, or the like is placed in a lower part of the card shooter apparatus (1). A transparent bottom plate (9) is provided on a bottom of the card storage unit (2). An optical sensor (10) that receives reflected lights of lights applied to end surfaces of the plurality of cards (100) stored in the card storage unit (2), and a DNA sensor (11) that obtains DNA information from a DNA-containing coating applied to the cards (100) stored in the card storage unit 2 are placed below the bottom plate (9). This allows inspection that a predetermined number of cards (416 cards in eight decks) are prepared with the plurality of cards being in the card shooter apparatus.
