ABSTRACT

The present disclosure relates to the technical field of terminals, and particularly relates to an information interaction method and apparatus, and a computer-readable storage medium. The information interaction method includes: receiving a trigger operation of a user for a conversation function; displaying, in response to the trigger operation, an interface for the conversation function; and displaying conversation information in the interface based on behavior of the user prior to the trigger operation, wherein the conversation information comprises a candidate question associated with content involved in the behavior.
