(54) Title: ANTI-VIBRATION TUBE SUPPORT FOR TUBE BUNDLES HAVING U-SHAPED BENDS

(57) Abstract: A tube support device (20) for a tube bundle having a plurality of elongated tubes (1) with a U-shaped bend portion (13) is disclosed. The tube support device (20) includes an elongated longitudinally extending strip (21) having pair of opposing faces. A plurality of tube engaging members (22, 23, 24) extend from the pair of opposing faces. The tube support device (20) includes an engagement assembly (25) formed on one end of the tube support device (20). The engagement assembly (25) is adapted to engage the anchor assembly (14) positioned within the tube bundle, whereby the tube support device (20) can be rotated into the desired orientation between the tubes (1) to prevent vibration damage .
