(54) Title: REMOTE POINTER FOR SIMULATORS

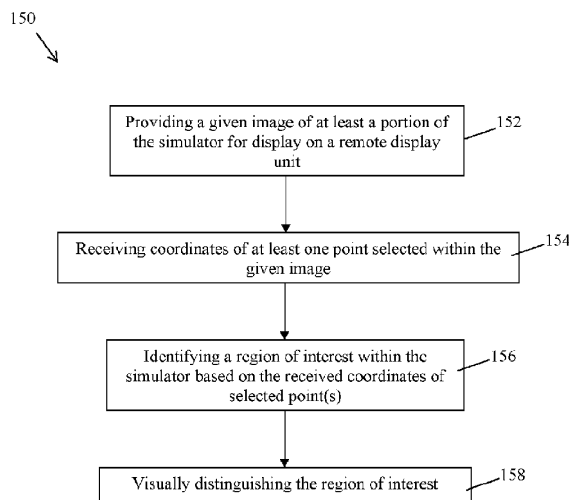

FIGURE 9

(57) Abstract: There is provided a computer-implemented method for remotely pointing to a region of interest within a simulation environment, the process comprising the steps of: receiving coordinates of at least one point selected within a given image of at least a portion of the simulation environment, the given image being displayed on a display unit; identifying a region of interest within the simulation environment based on the received coordinates of the at least one point; and providing control signals to a projector to visually distinguish the region of interest within the simulation environment.
