

ABSTRACT

The invention relates to organic chemistry, pharmacology and medicine and is concerned with the treatment of inflammatory and autoimmune diseases, such as psoriasis, atopic dermatitis, prurigo, Crohn's disease, colitis, gastrointestinal diseases
5 such as diarrhoea and irritable bowel syndrome, respiratory diseases such as asthma, COPD, bronchitis, rhinitis, and also cough and a series of other diseases associated with the activity of opioid and tachykinin receptors and of TRPV1 and TRPM8 ion channels using a 2-phenylethylamine N-(p-hydroxyphenylacetyl)phenylalanine compound

The invention, and also pharmaceutically acceptable adducts, hydrates, solvates are agonists of opioid receptors, antagonists of tachykinin receptors and of TRPV1 and TRPM8 ion channels. The invention also relates to pharmaceutical compositions comprising a therapeutically effective amount of the compound according to the
15 invention.
