

Fare Collection Device for Means of Public Transport**ABSTRACT**

This specification discloses a fare collection device for a public transport means,
5 comprising a first collector (100) for collecting a to-be-recognized image, and a second
collector (102) for obtaining payment information in a near-field non-contact-type collection
mode, such that a processor (104) triggers a service of receiving a ride fare when it is
determined that there is a target object within a set distance, and can switch to the second
collector (102) to acquire the payment information if it is determined that the
10 to-be-recognized image is not collected.
