

ABSTRACT (FIG. 1)

"ELEVATOR SYSTEM"

According to one embodiment, an elevator system includes a group controller (32) to control operation of cars (21a, 21b and 21c) based on a destination floor registered by a hall destination controller (12). The group controller (32), when instructed to use a car during maintenance service, detach the car being serviced among cars (21a, 21b and 21c) from group control and switch an operation mode of the car to a maintenance service mode, and controls operation of the car being serviced according to operation of an operation button while disregarding an abnormality related to the operation control using the hall destination controller (12).
