(54) Title: A TRANSIT SYSTEM FOR LEADING CABLES AND PIPES THROUGH A PARTITION, USE OF AN ANCHORING ELEMENT FOR SUCH A TRANSIT SYSTEM AND A METHOD FOR PROVIDING THE TRANSIT SYSTEM

Fig. 1

(57) Abstract: A transit system (10) for leading at least one cable (11) and/or at least one pipe in an axial direction through a partition, wherein the transit system comprises one or more sealing modules (12), a compression unit (13) and a frame (15). The one or more sealing modules (12) and the compression unit (13) are arranged in an opening of the frame (15), wherein the compression unit (13) is operable to compress the one or more sealing modules (12) arranged therein. The transit system further comprises a compressible anchoring element (26) comprising a plate portion (27) and at least one stop portion (28, 29) extending in a direction perpendicular to a plane of the plate portion (27), wherein the plate portion (27) is arranged between the sealing module (12) and the frame (15), and wherein the stop portion (28, 29) extends over a radially extending surface of the frame (15). Disclosed is also the use of such an anchoring element and a method for providing a transit system comprising such an anchoring element.
