

ABSTRACT PORTABLE DEVICE, IN PARTICULAR A WATCH, INCLUDING
AN ANTENNA ASSOCIATED WITH A REMOVABLE ELECTRONIC
MODULE AND SUCH AN ELECTRONIC MODULE

The watch (30) includes a case (32) within which is arranged an antenna coil (34) whose two ends are respectively connected to two electric contact pads (58, 59) arranged at the periphery of a housing (48) which can
5 house an electronic module (50) intended to be associated with the antenna coil (34) to together form an electronic signal receiver and/or transmitter carrying any type of information or data. The electronic module (50) consists of two electric contact terminals (56, 57) which abut
10 respectively against said two pads (58, 59) when the module (50) is arranged in the housing (48) and held therein by the cover (52). According to the invention, the cover (52) may be actuated to open the housing (28) and allow the removal of the electronic module (50), said
15 module being arranged in a removable manner in said housing (48).
