- 201 Acquire configuration data, wherein the configuration data comprises m candidate configuration resources for configuring a target project in a target application program, and m is a positive integer
- 202 According to scenario identification information respectively corresponding to the m candidate configuration resources, select, from among the m candidate configuration resources, n candidate configuration resources matching the current running scenario of the target application program, wherein n is a positive integer less than or equal to m
- 203 According to weights respectively corresponding to the n candidate configuration resources, select a target configuration resource from among the n candidate configuration resources
- 204 Configure the target project by using the target configuration resource

(57) Abstract: Provided are a resource allocation method and apparatus, a device, and a storage medium, which relate to the technical field of computers. The method comprises: acquiring configuration data, wherein the configuration data comprises m candidate configuration resources for configuring a target project in a target application program, and m is a positive integer; according to scenario identification information respectively corresponding to the m candidate configuration resources, selecting, from among the m candidate configuration resources, n candidate configuration resources matching the current running scenario of the target application

program, wherein n is a positive integer less than or equal to m ; according to weights respectively corresponding to the n candidate configuration resources, selecting a target configuration resource from among the n candidate configuration resources; and configuring the target project by using the target configuration resource. In the embodiments of the present application, a configuration resource is directly acquired, and the configuration resource is updated without depending on version updates, such that the cost of replacing the configuration resource is saved, and the time consumed by replacing the configuration resource is shortened.

(57) 摘要: 本申请提供了一种资源配置方法、装置、设备和存储介质, 涉及计算机技术领域。所述方法包括: 获取配置数据, 配置数据包括用于对目标应用程序中的目标项目进行配置的 m 个候选配置资源, m 为正整数; 根据 m 个候选配置资源分别对应的场景标识信息, 从 m 个候选配置资源中选取与目标应用程序的当前运行场景相匹配的 n 个候选配置资源, n 为小于或等于 m 的正整数; 根据 n 个候选配置资源分别对应的权重, 从 n 个候选配置资源中选取目标配置资源; 采用目标配置资源对目标项目进行配置。本申请实施例直接获取配置资源, 不依赖于版本的更新来更新配置资源, 从而节省了更换配置资源的成本, 缩短了更换配置资源的耗时。
