

with the I_PCM mode is not disclosed therein.

[0019]

Embodiments of the present invention are disclosed ~~has been made in view of these circumstances, and is directed to enhancing encoding efficiency while suppressing a decrease in the efficiency of encoding processing.~~

Solution to Problem

[0020]

According to an aspect of the present disclosure, there is provided an image processing apparatus. The image processing apparatus includes an encoding mode setter that sets, in units of coding units having a hierarchical structure, whether a non-compression mode is to be selected as an encoding mode for encoding image data, the non-compression mode being an encoding mode in which the image data is output as encoded data; and an encoder that encodes the image data in units of the coding units in accordance with a mode set by the encoding mode setter.

[0021]

The image processing apparatus may further include a shift processing controller that performs control, on a coding unit for which the non-compression mode has been set by the encoding mode setter, to skip shift processing in which a bit precision for encoding or decoding is increased; and a shift processor that performs the shift processing on

[0028]

The image processing apparatus may further include an identification information generator that generates identification information in units of the coding units, the identification information indicating whether the non-compression mode has been set by the encoding mode setter.

[0029]

Disclosed herein is~~According to an aspect of the present disclosure, there is provided~~ an image processing method for an image processing apparatus. The image processing method includes setting, with an encoding mode setter, in units of coding units having a hierarchical structure, whether a non-compression mode is to be selected as an encoding mode for encoding image data, the non-compression mode being an encoding mode in which the image data is output as encoded data; and encoding, with an encoder, the image data in units of the coding units in accordance with a set mode.

[0030]

Disclosed herein is~~According to another aspect of the present disclosure, there is provided~~ an image processing apparatus. The image processing apparatus includes an encoding mode determiner that determines, in units of coding units having a hierarchical structure, whether a non-compression mode has been selected as an encoding mode for encoding image data, the non-compression mode being an encoding mode in which the

controller so as to undergo the filter processing, the pixels being included in a current block which is a target to be processed.

[0033]

The filter processor may perform adaptive loop filtering on the locally decoded image, the adaptive loop filtering being adaptive filter processing using classification processing.

[0034]

The filter processor may perform the filter processing, in a case where filter identification information indicating whether the filter processing has been performed indicates that the filter processing has been performed on image data corresponding to the current block which is a target to be processed, only when control is performed by the filter processing controller so as to perform the filter processing on all pixels included in the current block.

[0035]

The encoding mode determiner may determine whether the non-compression mode has been selected, on the basis of identification information indicating whether the non-compression mode has been selected in units of the coding units.

[0036]

~~According to another aspect of the present~~
~~disclosure,~~Disclosed herein is

~~there is provided~~ an image processing method for an image processing apparatus. The image processing method includes determining, with an encoding mode determiner, in units of coding units having a hierarchical structure, whether a non-compression mode has been selected as an encoding mode for encoding image data, the non-compression mode being an encoding mode in which the image data is output as encoded data; and decoding, with a decoder, the encoded data in units of the coding units in accordance with a determined mode.

[0037]

According to an embodiment~~aspect~~ of the present disclosure, whether a non-compression mode is to be selected as an encoding mode for encoding image data is set in units of coding units having a hierarchical structure, the non-compression mode being an encoding mode in which the image data is output as encoded data, and the image data is encoded in units of the coding units in accordance with a set mode.

[0038]

According to another embodiment~~aspect~~ of the present disclosure, whether a non-compression mode has been selected as an encoding mode for encoding image data is determined in units of coding units having a hierarchical structure, the non-compression mode being an encoding mode in which the image

data is output as encoded data, and the encoded data is decoded in units of the coding units in accordance with a determined mode.

Advantageous Effects of Invention

[0039]

According to embodiments of the present invention~~disclosure~~, an image can be processed. In particular, encoding efficiency can be enhanced while suppressing a decrease in the efficiency of encoding processing.

Brief Description of Drawings

[0040]

[Fig. 1] Fig. 1 is a block diagram illustrating an image encoding apparatus that outputs image compression information based on an AVC coding format.

[Fig. 2] Fig. 2 is a block diagram illustrating an image decoding apparatus that receives image compression information based on the AVC coding format.
