ABSTRACT

A factoring commission system 1 of the present invention is characterized by including factoring target data generation means 51 for receiving charge detail information from a portal site 2 as information regarding a bill and for generating factoring target data to be subjected to factoring based on a condition specified by a supplier from the charge detail information, and factoring means 52 for transmitting this factoring target data to a purchase financial institution 6 for buying sales credits and for causing the purchase financial institution 6 to extract a purchasable sales credit from the factoring target data and remit a payment for the purchasable sales to a supplier specified financial institution 10. Thus, it is possible to reduce a burden of data processing for factoring imposed on the supplier, and batch-process factoring requests made to a number of financial institutions.
