

## ABSTRACT

POLYPHENOL COMPOUNDS AND TREATMENT AND AFTER TREATMENT OF METAL,  
PLASTIC AND PAINTED SURFACES THEREWITH

Chromated aluminum and aluminum alloy surfaces, to thier improve corrosion resistance, are treated with A composition for treatment and after treatment of surfaces, especially metals, with derivatives of polyphenol compounds that include substituted aminomethyl groups on at least some of the phenyl rings in the polyphenol polymers, with molecular weights within the range of about 700 to about 70,000 being preferred.
