

DESCRIPTION

CYCLOPENTYLACRYLIC ACID AMIDE DERIVATIVE

TECHNICAL FIELD

[0001]

5 The present invention relates to an activator of glucokinase (which may be abbreviated as GK). The present invention also relates to a pharmaceutical composition for the treatment or prevention of diabetes, obesity, and the like that contain the GK activator as an active ingredient.

10 BACKGROUND ART

[0002]

 According to a patient survey conducted by the Japanese Ministry of Health, Labor and Welfare in Heisei 14 (2002), the total number of diabetes patients in Japan was 2.28 million. Moreover, 15 according to a diabetes survey conducted in the same year, the total number of people "strongly suspected of having diabetes" and people in whom "the possibility of diabetes cannot be denied" had increased to 16.20 million, and this increase has been perceived as a problem.

[0003]

20 Since the insulin secretory capacity of Japanese is low due to genetic factors, the Japanese domestic market is mainly for impaired insulin secretion. However, due to the westernization of Japanese dietary habits, the number of patients with insulin resistance is gradually increasing in recent years. Accordingly, 25 there is a demand for drugs that are expected to be effective for

both impaired insulin secretion and insulin resistance.

[0004]

Glucokinase (GK), which catalyzes the phosphorylation of glucose, functions as a glucose sensor in the body and increases
5 glucose utilization in the liver and the secretion of insulin in a high glucose state. In diabetes patients, the homeostasis of glucose concentration in the body is not maintained in a normal state. Therefore, by activating GK, insulin secretion from the pancreas, which depends on the concentration of glucose, is
10 facilitated. In the liver, the activation of GK increases the glucose utilization and suppresses glucose output. This dual action reduces the blood glucose level (Non-Patent Documents 1 to 3). Therefore, it is desirable to provide GK activators useful as diabetes drugs that are effective for both impaired insulin secretion (action in
15 the pancreas) and insulin resistance (action in the liver).

[0005]

Various amide compounds are known as GK activators. Examples of such amide compounds include: aryl cycloalkyl propionamides (Patent Document 1); 2,3-di-substituted trans olefinic
20 N-heteroaromatic or ureido propionamides (Patent Document 2); alkynyl phenyl heteroaromatic amides (Patent Document 3); hydantoins (Patent Document 4); substituted phenylacetamides (Patent Document 5); para-alkyl, aryl, cycloheteroalkyl or heteroaryl (carbonyl or sulfonyl) amino substituted phenyl amides (Patent Document 6);
25 alpha-acyl and alpha-heteroatom-substituted benzene acetamides

(Patent Document 7); tetrazolyl-phenyl acetamides (Patent Document 8); fused heteroaromatic compounds (Patent Document 9); phenylacetamides having a cycloalkane with a single carbon atom substituted or a heterocycle (Patent Document 10); and other amide compounds (Patent Documents 11 to 21). However, these patent documents do not disclose acrylamide compounds in which two fluorine atoms are attached to different carbon atoms of a cyclopentyl group.

SUMMARY OF THE INVENTION

PROBLEMS TO BE SOLVED BY THE INVENTION

[0008]

15 It is an object of the present invention to provide compounds having an excellent GK activating effect or an excellent hypoglycemic effect and to make use of the compounds for the treatment or prevention of diabetes, obesity, and the like.

MEANS FOR SOLVING THE PROBLEMS

20 [0009]

The present inventors have conducted extensive studies to solve the above problems and found that, among acrylamide compounds having a 3,4-difluorocyclopentyl group at 3-position thereof, compounds having specific stereo structures have excellent GK activating and
25 hypoglycemic effects. Thus, the present invention has been

completed.

[0010]

Accordingly, the present invention relates to the following:

(1) A compound represented by the general formula (1) or a
5 pharmaceutically acceptable salt thereof:

[0011]

[Chemical formula 1]

[0012]

10 (wherein R¹ and R² are each independently a hydrogen atom, a halogen atom, an amino group, a hydroxyl group, a hydroxyamino group, a nitro group, a cyano group, a sulfamoyl group, a C₁ to C₆ alkyl group, a C₁ to C₆ alkoxy group, a C₁ to C₆ alkylsulfanyl group, a C₁ to C₆ alkylsulfinyl group, a C₁ to C₆ alkylsulfonyl group, or a C₁ to C₆
15 alkoxy-C₁ to C₆ alkylsulfonyl group, and A is a substituted or unsubstituted heteroaryl group).

[0013]

(2) The compound according to (1) or a pharmaceutically acceptable salt thereof, wherein R¹ and R² are each independently
20 a hydrogen atom, a halogen atom, or a C₁ to C₆ alkylsulfonyl group.

[0014]

(3) The compound according to (1) or a pharmaceutically acceptable

salt thereof, wherein R^1 is a hydrogen atom or a halogen atom, and R^2 is a C_1 to C_6 alkylsulfonyl group.

[0015]

(4) The compound according to (1) or a pharmaceutically acceptable salt thereof, wherein R^1 is a hydrogen atom and R^2 is a C_1 to C_6 alkylsulfonyl group.

[0016]

(5) The compound according to (1) or a pharmaceutically acceptable salt thereof, wherein R^1 is a hydrogen atom, and R^2 is a cyclopropylsulfonyl group.

[0017]

(6) The compound according to (1) or a pharmaceutically acceptable salt thereof, wherein R^1 is a hydrogen atom, and R^2 is a methylsulfonyl group.

[0018]

(7) The compound according to any of (1) to (6) or a pharmaceutically acceptable salt thereof, wherein the compound is represented by the general formula (1a):

[0019]

[Chemical formula 2]

[0020]

(wherein R^1 , R^2 , and A are as defined in (1)).

[0021]

(8) The compound according to any of (1) to (6) or a pharmaceutically acceptable salt thereof, wherein the compound is represented by the general formula (1b):

[0022]

[Chemical formula 3]

[0023]

(wherein R^1 , R^2 , and A are as defined in (1)).

[0024]

(9) The compound according to any of (1) to (8) or a pharmaceutically acceptable salt thereof, wherein A is an unsubstituted heteroaryl group or a heteroaryl group that is mono-substituted with a halogen atom, a C_1 to C_6 alkyl group optionally substituted with a halogen atom or a hydroxyl group, a C_1 to C_6 alkoxy group optionally substituted with a halogen atom or a hydroxyl group, a nitro group, a cyano group, or a group represented by the formula of $-(O)_p(CH_2)_mC(O)OR^3$ (wherein R^3 is a hydrogen atom or a C_1 to C_6 alkyl group, m is an integer of 0 to 2, and p is 0 or 1).

[0025]

(10) The compound according to any of (1) to (8) or a pharmaceutically acceptable salt thereof, wherein A is a heteroaryl group that is mono-substituted with a halogen atom, a C₁ to C₆ alkyl group, or a C₁ to C₆ hydroxyalkyl group.

5 [0026]

(11) The compound according to any of (1) to (8) or a pharmaceutically acceptable salt thereof, wherein A is a heteroaryl group that is mono-substituted with a C₁ to C₆ alkoxy group optionally substituted with a halogen atom or a hydroxyl group, or a C₁ to C₃ alkoxy-C₁ to C₃ alkoxy group.

[0027]

12) The compound according to any of (1) to (8) or a pharmaceutically acceptable salt thereof, wherein A is a heteroaryl group that is mono-substituted with a C₁ to C₆ alkylsulfanyl group that is optionally substituted with a halogen atom or a hydroxyl group.

[0028]

(13) The compound according to any of (9) to (12) or a pharmaceutically acceptable salt thereof, wherein A is an unsubstituted or mono-substituted five- or six-membered heteroaromatic ring, the heteroaromatic ring containing 1 to 3 heteroatoms selected from a sulfur atom, an oxygen atom, and a nitrogen atom, one of which is a nitrogen atom adjacent to a ring-connecting atom.

[0029]

(14) The compound according to any of (9) to (12) or a

pharmaceutically acceptable salt thereof, wherein A is an unsubstituted or mono-substituted fused heterocycle having a five- or six-membered heteroaromatic ring, the heteroaromatic ring containing 1 to 3 heteroatoms selected from a sulfur atom, an oxygen atom, and a nitrogen atom, one of the heteroatoms being a nitrogen atom adjacent to a ring-connecting atom.

[0030]

(15) The compound according to any of (9) to (12) or a pharmaceutically acceptable salt thereof, wherein A is an unsubstituted or substituted heteroaromatic ring selected from the following rings:

[0031]

[Chemical formula 4]

[0032]

(16) The compound according to (1), or a pharmaceutically acceptable salt thereof, selected from the group consisting of (E)-3-[(1 α ,

5 3 α ,

4 α)-3,4-difluorocyclopentyl]-N-(5-fluorothiazol-2-yl)-2-(4-(methylsulfonyl)phenyl)acrylamide,

4 α)-3,4-difluorocyclopentyl]-2-[4-(ethylsulfonyl)phenyl]-N-(1-methyl-1H-pyrazol-3-yl)acrylamide.

[0035]

(19) The compound according to (1), or a pharmaceutically acceptable

10 salt thereof, selected from the group consisting of (E)-3-[(1 α , 3 α ,

4 α)-3,4-difluorocyclopentyl]-2-[4-(2-methoxyethylsulfonyl)phenyl]-N-(thiazol-2-yl)acrylamide, (E)-3-[(1 α , 3 α ,

4 α)-3,4-difluorocyclopentyl]-2-[4-(2-methoxyethylsulfonyl)phen

15 yl]-N-(5-methylpyrazin-2-yl)acrylamide, and (E)-3-[(1 α , 3 α ,

4 α)-3,4-difluorocyclopentyl]-2-[4-(2-methoxyethylsulfonyl)phenyl]-N-(1-methyl-1H-pyrazol-3-yl)acrylamide.

[0036]

(20) A method for treating or preventing diabetes, comprising

20 administering the compound according to any of (1) to (19) or a pharmaceutically acceptable salt thereof.

[0037]

(21) Use of a compound according to any of (1) to (19) or a pharmaceutically acceptable salt thereof for manufacturing a

25 pharmaceutical for treatment or prevention of diabetes.

[0038]

(22) A pharmaceutical composition, comprising the compound according to any of (1) to (19), or a pharmaceutically acceptable salt thereof, and a pharmaceutically acceptable carrier.

5 [0039]

(23) A compound represented by the general formula (2):

[0040]

[Chemical formula 5]

10 [0041]

(wherein R^1 and R^2 are each independently a hydrogen atom, a halogen atom, an amino group, a hydroxyl group, a hydroxyamino group, a nitro group, a cyano group, a sulfamoyl group, a C_1 to C_6 alkyl group, a C_1 to C_6 alkoxy group, a C_1 to C_6 alkylsulfanyl group, a C_1 to C_6 alkylsulfinyl group, a C_1 to C_6 alkylsulfonyl group, or a C_1 to C_6 alkoxy- C_1 to C_6 alkylsulfonyl group).

[0042]

(24) The compound according to (23), wherein R^1 is a hydrogen atom, and R^2 is a cyclopropylsulfonyl group.

20 [0043]

(25) The compound according to (23), wherein R^1 is a hydrogen atom, and R^2 is a methylsulfonyl group.

ADVANTAGES OF THE INVENTION

[0044]

According to the present invention, compounds having an excellent GK activating or hypoglycemic effect and few side effects (such as Q-T interval prolongation (relating to hERG current suppression) and insulin-induced hypoglycemia) are provided, and therefore pharmaceuticals excellent for the treatment or prevention of diabetes, obesity, and the like can be provided.

BEST MODE FOR CARRYING OUT THE INVENTION

[0045]

The term "halogen atom" refers to a fluorine atom, a chlorine atom, a bromine atom, or an iodine atom.

[0046]

The term "C₁ to C₆ alkyl group" is a linear or branched alkyl group having 1 to 6 carbon atoms or a cyclic alkyl group having 3 to 6 carbon atoms. Examples of the C₁ to C₆ alkyl group include a methyl group, an ethyl group, a propyl group, an isopropyl group, a butyl group, an isobutyl group, a sec-butyl group, a tert-butyl group, a cyclopropyl group, and a cyclobutyl group.

[0047]

The term "C₁ to C₆ alkoxy group" is a linear or branched alkoxy group having 1 to 6 carbon atoms or a cyclic alkoxy group having 3 to 6 carbon atoms. Examples of the C₁ to C₆ alkoxy group include a methoxy group, an ethoxy group, a propoxy group, an isopropoxy group, a butoxy group, an isobutoxy group, a sec-butoxy group, a

tert-butoxy group, a cyclopropoxy group, and a cyclobutoxy group.

[0048]

The term "C₁ to C₆ alkylsulfanyl group" is a linear or branched alkylsulfanyl group having 1 to 6 carbon atoms or a cyclic

5 alkylsulfanyl group having 3 to 6 carbon atoms. Examples of the C₁ to C₆ alkylsulfanyl group include a methylsulfanyl group, an ethylsulfanyl group, a propylsulfanyl group, an isopropylsulfanyl group, a butylsulfanyl group, an isobutylsulfanyl group, a sec-butylsulfanyl group, a tert-butylsulfanyl group, a
10 cyclopropylsulfanyl group, a cyclobutylsulfanyl group, and a cyclopentylsulfanyl group.

[0049]

The term "C₁ to C₆ alkylsulfinyl group" is a linear or branched alkylsulfinyl group having 1 to 6 carbon atoms or a cyclic

15 alkylsulfinyl group having 3 to 6 carbon atoms. Examples of the C₁ to C₆ alkylsulfinyl group include a methylsulfinyl group, an ethylsulfinyl group, a propylsulfinyl group, an isopropylsulfinyl group, a butylsulfinyl group, an isobutylsulfinyl group, a sec-butylsulfinyl group, a tert-butylsulfinyl group, a
20 cyclopropylsulfinyl group, a cyclobutylsulfinyl group, and a cyclopentylsulfinyl group.

[0050]

The term "C₁ to C₆ alkylsulfonyl group" is a linear or branched alkylsulfonyl group having 1 to 6 carbon atoms or a cyclic

25 alkylsulfonyl group having 3 to 6 carbon atoms. Examples of the

C₁ to C₆ alkylsulfonyl group include a methylsulfonyl group, an ethylsulfonyl group, a propylsulfonyl group, an isopropylsulfonyl group, a butylsulfonyl group, an isobutylsulfonyl group, a sec-butylsulfonyl group, a tert-butylsulfonyl group, a cyclopropylsulfonyl group, a cyclobutylsulfonyl group, and a cyclopentylsulfonyl group.

[0051]

The term "C₁ to C₆ alkoxy-C₁ to C₆ alkylsulfonyl group" is a linear or branched alkylsulfonyl group having 1 to 6 carbon atoms that is substituted with a linear or branched alkoxy group having 1 to 6 carbon atoms or with a cyclic alkoxy group having 3 to 6 carbon atoms. Examples thereof include a methoxymethylsulfonyl group, a methoxyethylsulfonyl group, a methoxypropylsulfonyl group, an isopropoxymethylsulfonyl group, and a cyclopropoxymethylsulfonyl group.

[0052]

The term "heteroaryl group" is a five- or six-membered heteroaromatic ring containing 1 to 3 heteroatoms selected from a sulfur atom, an oxygen atom, and a nitrogen atom as the constituent atom of the ring, and the heteroaromatic ring may optionally form a fused ring with a benzene ring or a five- or six-membered heteroaromatic ring. Preferred examples of the heteroaryl group include a group in which the heteroaromatic ring contains 1 to 3 heteroatoms selected from a sulfur atom, an oxygen atom, and a nitrogen atom and in which one of the heteroatoms is a nitrogen atom adjacent

to a ring-connecting atom. The ring-connecting atom is an atom in the ring that is involved in the bond to the nitrogen atom in the amide group, and a carbon atom is preferred as the ring-connecting atom.

5 [0053]

Preferred examples of the heteroaryl group include a thiazolyl group, a thiadiazolyl group, a pyrazolyl group, a pyridyl group, a pyrazinyl group, a pyrimidinyl group, a pyridazinyl group, an oxazolyl group, an isoxazolyl group, an imidazolyl group, a triazinyl group, a benzothiazolyl group, a benzoxazolyl group, a benzimidazolyl group, a pyridothiazolyl group, and a quinolinyl group. More preferably, the heteroaryl group is a thiazolyl group, a pyrazolyl group, a pyrazinyl group, a pyridyl group, a thiazolo[5,4-b]pyridinyl group, a thiadiazolyl group, or a pyridothiazolyl group.

[0054]

Preferably, the "substituted or unsubstituted heteroaryl group" in A is an unsubstituted or mono-substituted heteroaryl group. Examples of the substituent include: halogen atoms; C₁ to C₆ alkyl groups optionally substituted with a halogen atom or a hydroxyl group (such as a methyl group, a tert-butyl group, a cyclopropyl group, a fluoroethyl group, a difluoromethyl group, and a 1,2-dihydroxyethyl group); C₁ to C₆ alkoxy groups optionally substituted with a halogen atom or a hydroxyl group; C₁ to C₃ alkoxy-C₁ to C₃ alkoxy groups; C₁ to C₃ alkoxycarbonyl-C₁ to C₃ alkoxy groups;

C₁ to C₃ alkoxy carbonyl-C₁ to C₆ alkylsulfanyl groups; C₁ to C₆ alkylsulfanyl groups; C₁ to C₆ aminoalkylsulfanyl group optionally substituted with a C₁ to C₃ alkyl group; C₁ to C₆ alkylsulfanyl-C₁ to C₆ alkoxy groups; aryl groups (such as a phenyl group), heteroaryl groups; aliphatic heterocyclyl groups optionally substituted with a C₁ to C₆ alkyl group (such as a morpholino group and a dioxolyl group); aliphatic heterocyclyl carbonyl groups; aliphatic heterocyclylsulfonyl groups; aliphatic heterocyclyl-C₁ to C₃ alkyl groups; aliphatic heterocyclyl-C₁ to C₃ alkoxy group; aliphatic heterocycliloxy-C₁ to C₃ alkoxy groups; aminosulfonyl groups optionally substituted with a C₁ to C₃ alkyl group; C₁ to C₆ hydroxyalkylsulfanyl groups; a nitro group; a cyano group; groups represented by the formula of

(wherein R³ is a hydrogen atom, a C₁ to C₆ alkyl group, or a C₁ to C₃ alkoxy-C₁ to C₃ alkyl group, m is an integer of 0 to 2, and p is 0 or 1); and groups represented by the formula of

(wherein R⁴ and R⁵ are each independently a hydroxyl group, a C₁ to C₃ alkyl group, or a C₁ to C₃ alkoxy group, and m is an integer of 0 to 2).

[0055]

Examples of the pharmaceutically acceptable salt include salts of inorganic and organic acids such as hydrochloric acid, hydrobromic acid, nitric acid, sulfuric acid, phosphoric acid, citric acid,

formic acid, maleic acid, acetic acid, succinic acid, and tartaric acid.

[0056]

Specific examples of the compound according to the present invention include the following compounds and pharmaceutically acceptable salts thereof.

(E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-N-(5-fluorothiazol-2-yl)-2-(4-(methylsulfonyl)phenyl)acrylamide,

[0057]

The compound represented by the general formula (1) of the
20 present invention can be produced by, for example, the following
production process with the compound represented by the general
formula (2) as an intermediate:

[0058]

[Chemical formula 6]

[0059]

(wherein R^1 , R^2 , and A are as defined above).

In this process, the compound represented by the general
 5 formula (2) is reacted with a heteroarylamine in the presence of
 a suitable reagent to produce the compound represented by the general
 formula (1).

[0060]

This reaction may be performed using an appropriate method
 10 such as a method using a general condensation agent, the active
 ester method, the mixed anhydride method, the acid halide method,
 or the carbodiimide method. Examples of the reagent used in the
 above reaction include thionyl chloride, oxalyl chloride,
 N,N'-dicyclohexylcarbodiimide, N,N'-diisopropylcarbodiimide,
 15 1-methyl-2-bromopyridinium iodide, N,N'-carbonyldiimidazole,
 diphenylphosphoryl chloride, diphenylphosphoryl azide,
 N,N'-disuccinimidyl carbonate, N,N'-disuccinimidyl oxalate,
 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide hydrochloride,
 ethyl chloroformate, isobutyl chloroformate,
 20 benzotriazo-1-yl-oxy-tris(dimethylamino)phosphonium
 hexafluorophosphate, and N-bromosuccinimide/triphenylphosphine.

In this process, a base and a condensation aid may be used together with the above reagent. Any base can be used in this process, so long as it is not involved in the reaction. The reaction can be performed in the presence of such a base. Examples of the base include: alkali metal alkoxides such as sodium methoxide and sodium ethoxide; alkali metal hydrides such as sodium hydride and potassium hydride; alkali metal organic bases such as n-butyllithium, lithium bis(trimethylsilyl)amide, sodium bis(trimethylsilyl)amide, and potassium bis(trimethylsilyl)amide; tertiary organic bases such as triethylamine, diisopropylethylamine, pyridine, N-methylmorpholine, imidazole, N-methylpyrrolidine, N-methylpiperidine, 1,5-diazabicyclo[4.3.0]non-5-ene, and 1,8-diazabicyclo[5.4.0]undec-7-ene; and inorganic bases such as potassium carbonate and sodium hydrogen carbonate. Examples of the condensation aid include N-hydroxybenzotriazole hydrate, N-hydroxysuccinimide, N-hydroxy-5-norbornene-2,3-dicarboxyimide, 3-hydroxy-3,4-dihydro-4-oxo-1,2,3-benzotriazole, and pentafluorophenol. Any solvent can be used as the reaction solvent, so long as it is not involved in the reaction. Preferred examples of such a solvent include: hydrocarbon solvents such as pentane, hexane, cyclohexane, benzene, toluene, and xylene; halogenated hydrocarbon solvents such as dichloromethane, 1,2-dichloroethane, chloroform, and carbon tetrachloride; ether solvents such as diethyl ether, tetrahydrofuran, and 1,4-dioxane; and aprotic polar solvents such as acetonitrile, propionitrile, nitromethane, nitroethane,

N,N-dimethylformamide, N-methylpiperidone, sulfolane, and dimethyl sulfoxide. The reaction typically proceeds smoothly at -78°C to 200°C.

[0061]

5 Furthermore, the compounds represented by the formulae (1) and (2) of the present invention can also be produced based on the following production steps.

[Formula 7]

10 (wherein R^6 represents an optionally substituted alkoxy group or an optionally substituted amino group, R^7 represents a boric acid derivative, a halogen atom, or a trifluoromethanesulfonyloxy group, and X represents a halogen atom; R^1 and R^2 are as defined above)

[0062]

15 (First Step)

This step is for producing an acrylic acid derivative (4) by

reacting the compound represented by the formula (3) with a glyoxylaldehyde in the presence of a base. Examples of the base used in this reaction include alkali metal amides such as lithium diisopropylamide, lithium bis(trimethylsilyl)amide, sodium
5 bis(trimethylsilyl)amide, and potassium bis(trimethylsilyl)amide, metal hydrides such as lithium hydride, sodium hydride, and potassium hydride, potassium carbonate, tert-butoxy potassium, and n-butyllithium. In this reaction, lithium bis(trimethylsilyl)amide is preferred.

10 Any solvent can be used as the solvent used in this reaction, as long as it is not involved in the reaction. Examples of such a solvent include hydrocarbon solvents such as pentane, hexane, cyclohexane, benzene, toluene, and xylene, halogenated hydrocarbon solvents such as dichloromethane, 1,2-dichloroethane, chloroform,
15 and carbon tetrachloride, and ether solvents such as diethyl ether, tetrahydrofuran, and 1,4-dioxane. The reaction proceeds smoothly at -80°C to 80°C.

[0063]

(Second Step)

20 This step is for producing a 3-(3,4-difluorocyclopentyl)-2-halogeno acrylic acid derivative by halogenating the 3-(3,4-difluorocyclopentyl)acrylic acid derivative represented by the formula (4) obtained in the above first step with molecular halogen, and then reacting with the base.

25 Examples of the base used in this reaction include carbonic

acid salts such as sodium carbonate, potassium carbonate, calcium carbonate, cesium carbonate, and barium carbonate, or organic bases such as triethylamine, diisopropylethylamine,

N,N,N,N-tetramethylethylenediamine, diazabicyclo[5.4.0]-7-

5 undecene, diazabicyclo[4.3.0]-5- nonene, phosphazene bases, and pentaaisopropylguanidine. However, in this reaction, triethylamine is preferred.

Any solvent can be used as the solvent used in this reaction, as long as it is not involved in the reaction. Examples of such
10 a solvent include hydrocarbon solvents such as pentane, hexane, cyclohexane, benzene, toluene, and xylene, halogenated hydrocarbon solvents such as dichloromethane, 1,2-dichloroethane, chloroform, and carbon tetrachloride, and ether solvents such as diethyl ether, tetrahydrofuran, and 1,4-dioxane. The reaction proceeds smoothly
15 at -80°C to 80°C.

[0064]

(Third Step)

This step is for producing a
3-(3,4-difluorocyclopentyl)-2-(substituted phenyl)acrylic acid
20 derivative by reacting a compound represented by the formula (6) with the 3-(3,4-difluorocyclopentyl)-2-halogeno acrylic acid derivative represented by the formula (5) obtained in the above second step in the presence of a catalyst and a base.

In the formula, if R^7 is a halogen atom or a
25 trifluoromethanesulfonyloxy group, for example, boric acid,

pinacolato diboron or the like can be reacted to convert the compound into a boric acid derivative for use in the presence of a palladium complex, such as

1,1-bis(diphenylphosphino)ferrocene-palladium(II) dichloride,

5 and an acetic acid salt, such as potassium acetate. The thus-obtained boric acid derivative is used after isolated and purified, or is prepared in the reaction system. As the catalyst used in this reaction, tetrakis(triphenylphosphine)palladium, palladium acetate, or a palladium complex such as

10 1,1-bis(diphenylphosphino)ferrocene-palladium(II) dichloride, can be used.

As the base used in this reaction, a carbonic acid salt such as sodium carbonate, potassium carbonate, calcium carbonate, cesium carbonate, and barium carbonate, or an acetic acid salt such as
15 potassium acetate and sodium acetate, can be used.

Any solvent can be used as the reaction solvent, so long as it is not involved in the reaction. Examples of such a solvent include: hydrocarbon solvents such as pentane, hexane, cyclohexane, benzene, toluene, and xylene; halogenated hydrocarbon solvents such
20 as dichloromethane, 1,2-dichloroethane, chloroform, and carbon tetrachloride; ether solvents such as diethyl ether, tetrahydrofuran, and 1,4-dioxane; aprotic polar solvents such as acetonitrile, propionitrile, nitromethane, nitroethane, N,N-dimethylformamide, and dimethyl sulfoxide; alcohol solvents such as methanol, ethanol,
25 1-propanol, 2-propanol, 1-butanol, 2-butanol, 2-methyl-1-propanol,

2-methyl-2-propanol, and benzyl alcohol; and water. One kind of solvent, or two or three kinds of solvents in combination, may be used. The reaction proceeds smoothly at -80°C to 150°C.

[0065]

5 One embodiment of the present invention relates to a pharmaceutical containing, as an active ingredient, the compound represented by the formula (1) or a pharmaceutically acceptable salt thereof. The pharmaceuticals of the present invention have a GK activating effect or a hypoglycemic effect and therefore is
10 useful for the treatment or prevention of type I diabetes, type II diabetes, hyperlipemia (hyper LDL cholesterolemia, hypertriglyceridemia, and hypo HDL cholesterolemia), obesity, insulinresistance, impairedglucose tolerance, metabolic syndrome, and the like.

15 [0066]

 Thepharmaceuticalofthepresentinventionmaybeadministered orallyorparenterally, for example, intrarectally, subcutaneously, intravenously, intramuscularly, or percutaneously.

[0067]

20 The compound of the present invention or a pharmaceutically acceptable salt thereof may be used as pharmaceuticals in any form (for example, a solid composition, a liquid composition, or other type of composition). An optimal form is selected in accordance with need. The pharmaceutical of the present invention can be
25 produced by adding a pharmaceutically acceptable carrier to the

compound of the present invention. More specifically, commonly used additives such as excipient, extender, binder, disintegrator, coating, sugar-coating agent, pH modifier, and solubilizing agent and an aqueous or non-aqueous solvent are added to the compound of the present invention, and the mixture can be formed into various forms such as tablets, pills, capsules, granules, powders, powdered drugs, liquid formulations, emulsions, suspensions, and injections by any commonly used formulation method.

[0068]

The dose of the compound of the present invention or a pharmaceutically acceptable salt thereof depends on the type of disease, the condition, weight, age, and sex of a patient, the route of administration, and the like. The oral dose for an adult is preferably about 0.01 to about 1000 mg/kg body weight/day, and more preferably about 0.5 to about 200 mg/kg body weight/day. This amount may be administered in a single dose or in divided doses throughout the day.

[0069]

If necessary, the compound of the present invention or a pharmaceutically acceptable salt thereof may be used together with one or more compounds other than GK activators. For example, the compound of the present invention or a pharmaceutically acceptable salt thereof may be used in combination with one or more of anti-obesity agents and antidiabetic (or hypoglycemic) agents including sulfonylureas, biguanides, glucagon antagonists,

α -glucosidase inhibitors, insulin secretion promoters, insulin sensitizers, and the like.

[0070]

Examples of the sulfonylureas include glyburide, glimepiride,
5 glipiride, glipizide, chlorpropamide, gliclazide, glisoxepide,
acetohexamide, glibornuride, tolbutamide, tolazamide, carbutamide,
gliquidone, glyhexamide, phenbutamide, and tolcyclamide. Examples
of the biguanides include metformin, phenformin, and buformin.
Examples of the glucagon antagonists include peptide and non-peptide
10 glucagon antagonists. Examples of the α -glucosidase inhibitors
include acarbose, voglibose, and miglitol. Examples of the insulin
sensitizers include troglitazone, rosiglitazone, pioglitazone, and
ciglitazone. Examples of the anti-obesity agents include
sibutramine and orlistat. The compound of the present invention
15 or a pharmaceutically acceptable salt thereof may be administered
simultaneously, sequentially or separately with other antidiabetic,
hypoglycemic, and anti-obesity agents.

[0071]

Example 1

20 3-[(1 α , 3 α , 4 α)-3,4-Difluorocyclopentyl]-2-[4-(methylthio)phenyl]acrylic
acid ethyl ester

[0072]

[Chemical formula 8]

[0073]

(1 α , 3 α ,

4 α)-(3,4-Difluorocyclopentyl)methyltriphenylphosphonium iodide

5 (2.67 g) was suspended in tetrahydrofuran (10 mL). Lithium

bis(trimethylsilyl)amide (a 1 mol/L tetrahydrofuran solution, 5.30 mL) was added to the suspension at -40°C in an argon atmosphere,

and the mixture was stirred at -40°C for 2 hours. Subsequently,

a solution of 2-[(4-methylthio)phenyl]oxoacetic acid ethyl ester

10 (1.12 g) in tetrahydrofuran (3.70 mL) was added dropwise to the

reaction mixture cooled to -40°C, and the resultant mixture was

stirred at -40°C for 2 hours and further stirred at room temperature

for 18 hours. Water (10 mL) was added to the reaction mixture, and

the pH of the mixture was adjusted to 2 with 3 mol/L hydrochloric

15 acid. Tetrahydrofuran was evaporated under reduced pressure, and

the residue was extracted with ethyl acetate (20 mL x 2). The ethyl

acetate extracts were combined, washed with saturated brine (10

mL), dried over anhydrous sodium sulfate, filtrated, and

concentrated under reduced pressure. The residue was purified by

20 silica gel column chromatography (eluent; hexane : ethyl acetate

= 4:1) to give 3-[(1 α , 3 α ,

4 α)-3,4-difluorocyclopentyl]-2-[4-(methylthio)phenyl]acrylic

acid ethyl ester (1.54 g).

^1H NMR (400 MHz, CDCl_3) δ 1.27 (t, $J = 7.3$ Hz, 3H), 1.30 (t, $J = 7.3$ Hz, 3H), 1.84–2.19 (m, 6H), 2.28–2.42 (m, 2H), 2.49 (s, 3H), 2.50 (s, 3H), 2.55–2.69 (m, 1H), 3.17–3.31 (m, 1H), 4.21 (q, $J = 7.3$ Hz, 2H), 4.27 (q, $J = 7.3$ Hz, 2H), 4.68–5.04 (m, 4H), 6.13 (d, $J = 9.8$ Hz, 1H), 7.00 (d, $J = 10.4$ Hz, 1H), 7.03–7.08 (m, 2H), 7.22–7.25 (m, 6H).

MS (ESI $^+$) m/z : 327 (MH^+).

[0074]

10 Example 2

3-[(1 α , 3 α , 4 α)-3,4-Difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylic acid ethyl ester

[0075]

15 [Chemical formula 9]

[0076]

3-[(1 α , 3 α ,

4 α)-3,4-Difluorocyclopentyl]-2-[4-(methylthio)phenyl]acrylic

20 acid ethyl ester (3.00 g) was dissolved in dichloromethane (31 mL).

m-Chloroperoxybenzoic acid (5.37 g) was added to the prepared

solution cooled in an ice bath, and the mixture was stirred for 0.5 hours while cooled in the ice bath and further stirred at room temperature for 1.5 hours. Insoluble materials in the reaction mixture were removed by filtration, and the filtrate was diluted

5 with dichloromethane (42 mL). The obtained dichloromethane solution was washed with a 10% aqueous sodium sulfite solution (20 mL x 2), a saturated aqueous sodium hydrogen carbonate solution (20 mL x 2), and saturated brine (20 mL), dried over anhydrous sodium sulfate, filtrated, and concentrated under reduced pressure to give

10 3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylic acid ethyl ester (3.41 g).

¹H NMR (400 MHz, CDCl₃) δ 1.30 (t, J = 7.3 Hz, 3H), 1.31 (t, J = 7.3 Hz, 3H), 1.86–2.20 (m, 6H), 2.30–2.56 (m, 3H), 3.06 (s, 3H),

15 3.10 (s, 3H), 3.35–3.48 (m, 1H), 4.24 (q, J = 7.3 Hz, 2H), 4.29 (q, J = 7.3 Hz, 2H), 4.69–5.10 (m, 4H), 6.29 (d, J = 9.8 Hz, 1H), 7.09 (d, J = 10.4 Hz, 1H), 7.33–7.38 (m, 2H), 7.48–7.53 (m, 2H), 7.89–7.93 (m, 2H), 7.93–7.97 (m, 2H).

MS (EI) m/z: 358 (M⁺).

20 [0077]

Example 3

(E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylic acid methyl ester

25 [0078]

[Chemical formula 10]

[0079]

3-[(1 α , 3 α ,

5 4 α)-3,4-Difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylic acid ethyl ester (5.00 g) was suspended in methanol (26 mL). A sodium methoxide solution prepared from 460 mg of sodium and 20 mL of methanol was added dropwise to the obtained suspension at room temperature, and the resultant mixture was stirred at room
10 temperature for 3 hours. Methanol was evaporated under reduced pressure, and the resultant residue was collected by filtration and washed with methanol (50 mL) to give (E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylic acid methyl ester (3.98 g).

15 ^1H NMR (400 MHz, CDCl_3) δ 1.87–2.20 (m, 4H), 2.43–2.58 (m, 1H), 3.10 (s, 3H), 3.78 (s, 3H), 4.69–4.95 (m, 2H), 7.12 (d, J = 11.0 Hz, 1H), 7.34 (d, J = 7.9 Hz, 2H), 7.96 (d, J = 7.9 Hz, 2H).

MS (EI) m/z : 344 (M^+).

[0080]

20 Example 4

(E)-3-[(1 α , 3 α ,

4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylic acid

[0081]

[Chemical formula 11]

5

[0082]

A mixed solution of concentrated sulfuric acid (6.89 mL), acetic acid (37.1 mL), and water (22.5 mL) was added to (E)-3-[(1 α , 3 α ,

10 4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylic acid methyl ester (3.95 g), and the mixture was stirred under heating at 103°C (internal temperature) for 3 hours. After allowed to cool, the reaction mixture was evaporated under reduced pressure. Water (37 mL) was added to the residue, and the precipitate was
15 collected by filtration and washed with water (100 mL). The collected precipitate was dissolved in a saturated aqueous sodium hydrogen carbonate solution and extracted with dichloromethane (15 mL x 2). Concentrated hydrochloric acid was added to the aqueous layer, while cooled in an ice bath, to make it acidic. The resultant precipitate
20 was collected by filtration and washed with water (100 mL) to give (E)-3-[(1 α , 3 α ,

4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylic acid (3.26 g).

^1H NMR (400 MHz, CDCl_3) δ 1.88–2.21 (m, 4H), 2.47–2.62 (m, 1H), 3.09 (s, 3H), 4.73–4.97 (m, 2H), 7.24 (d, J = 10.4 Hz, 1H), 7.34–7.39 (m, 2H), 7.94–7.99 (m, 2H).

MS (EI) m/z : 330 (M^+).

[0083]

Example 5

(E)-3-[(1 α , 3 α ,

4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]-N-(thiazol-2-yl)acrylamide (compound 1A of the present invention)

[0084]

[Chemical formula 12]

[0085]

Thionyl chloride (3.43 mL) was added to (E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylic acid (343 mg), and the mixture was heated to reflux for 45 minutes. After the mixture was cooled to room temperature, thionyl chloride was removed by evaporation. Toluene (3 mL x 3) was added to the mixture, and the resultant mixture was evaporated under reduced

pressure. A solution of 2-aminothiazole (104 mg) in pyridine (1.37 mL) was added to the resultant residue in a salted ice bath, and the mixture was stirred at room temperature for 1 hour. The reaction mixture was diluted with ethyl acetate (30 mL) and washed sequentially with 1 mol/L hydrochloric acid (30 mL x 2), a saturated aqueous sodium hydrogen carbonate solution (30 mL x 2) and saturated brine (30 mL), dried over anhydrous sodium sulfate, and filtrated, and the solvent was evaporated under reduced pressure. The obtained residue was purified by silica gel column chromatography (eluent; chloroform : methanol = 50:1), and the obtained compound was washed with diethyl ether to give (E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]-N-(thiazol-2-yl)acrylamide (154 mg).

MS (ESI⁺) m/z: 413 (MH⁺).

HRMS (ESI⁺) for C₁₈H₁₉F₂N₂O₃S₂ (MH⁺): calcd., 413.08051; found, 413.08048.

¹H NMR (400 MHz, CDCl₃) δ 1.82-2.01 (m, 2H), 2.07-2.25 (m, 2H), 2.48-2.60 (m, 1H), 3.25 (s, 3H), 4.84-5.08 (m, 2H), 7.83 (d, J = 10.4 Hz, 1H), 7.21 (brs, 1H), 7.47 (d, J = 8.6 Hz, 2H), 7.51 (d, J = 3.1 Hz, 1H), 7.94 (d, J = 8.6 Hz, 2H), 12.4 (brs, 1H).

[0086]

Example 6

Compounds 2A to 62A of the present invention were produced according to the same procedure as in Example 5.

In the following Tables, the optical rotations of the compounds

7A, 8A, 40A, 41A, 53A, and 54A of the present invention were measured using methanol as a solvent, and the optical rotations of the compounds 51A and 52A of the present invention were measured using dichloromethane. The optical rotations of the rest of the compounds of the present invention were measured using chloroform.

Example 7

(E)-2-[4-(cyclopropylthio)phenyl]-3-[(1 α , 3 α ,

5 4 α)-3,4-difluorocyclopentyl]acrylic acid ethyl ester

[0101]

[Chemical formula 14]

[0102]

(1 α , 3 α ,

4 α)-(3,4-Difluorocyclopentyl)methyltriphenylphosphonium iodide (60.9 g) was suspended in tetrahydrofuran (186 mL). Lithium bis(trimethylsilyl)amide (a 1 mol/L tetrahydrofuran solution, 120 mL) was added to the suspension cooled in an ice bath, and the mixture was stirred for 1 hour while cooled in the ice bath. A solution of [(4-cyclopropylthio)phenyl]oxoacetic acid ethyl ester (25.0 g) in tetrahydrofuran (120 mL) was added dropwise to the reaction mixture cooled in an ice bath, and the resultant mixture was stirred for 1 hour while cooled in the ice bath and further stirred at room temperature for 5 hours. Water (230 mL) was added to the reaction mixture, and the pH of the mixture was adjusted to 6 with 1 mol/L hydrochloric acid. Then, tetrahydrofuran was evaporated under reduced pressure, and the residue was extracted with ethyl acetate (2 x 540 mL). The ethyl acetate extracts were combined, washed with saturated brine (180 mL), dried over anhydrous sodium sulfate, filtrated, and concentrated under reduced pressure. The residue was purified by silica gel column chromatography (eluent; hexane : ethyl acetate = 4:1) to give

(E)-2-[4-(cyclopropylthio)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid ethyl ester (12.2 g), (Z)-2-[4-(cyclopropylthio)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid ethyl ester (7.71 g), and 2-[4-(cyclopropylthio)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid ethyl ester (14.5 g) (a

mixture of E-form and Z-form). Of these, only the title compound was used in the next step.

MS (EI) m/z: 352 (M^+).

HRMS (EI) for $C_{19}H_{22}F_2N_2O_2S$ (M^+): calcd., 352.1309; found, 352.1302.

5 1H NMR (400 MHz, $CDCl_3$) δ 0.69–0.73 (m, 2H), 1.04–1.11 (m, 2H), 1.28 (t, J = 7.3 Hz, 3H), 1.89–2.03 (m, 2H), 2.06–2.21 (m, 3H), 2.58–2.69 (m, 1H), 4.22 (q, J = 7.3 Hz, 2H), 4.73–4.92 (m, 2H), 6.97 (d, J = 10.4 Hz, 1H), 7.03–7.37 (m, 2H).

[0103]

10 Example 8

(E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid ethyl ester

[0104]

[Chemical formula 15]

15

[0105]

(E)-2-[4-(cyclopropylthio)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid ethyl ester (8.81 g) was dissolved in dichloromethane (90 mL). m-Chloroperoxybenzoic acid (14.6 g) was added to the prepared solution cooled in an ice bath, and the mixture was stirred for 1 hour while cooled in the ice bath

20

and further stirred at room temperature for 1 hour. Insoluble materials in the reaction mixture were removed by filtration, and the filtrate was diluted with dichloromethane (150 mL). The obtained dichloromethane solution was washed with a 10% aqueous sodium sulfite solution (2 x 35 mL), a saturated aqueous sodium hydrogen carbonate solution (2 x 35 mL), and water (35 mL), dried over anhydrous sodium sulfate, filtrated, and concentrated under reduced pressure. The residue was purified by silica gel column chromatography (eluent; hexane : ethyl acetate = 1:1) to give

(E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid ethyl ester (9.54 g).
MS (EI) m/z: 384 (M⁺).

HRMS (EI) for C₁₉H₂₂F₂N₂O₄S (M⁺): calcd, 384.1207; found, 384.1163.

¹H NMR (400 MHz, CDCl₃) δ 1.03–1.10 (m, 2H), 1.30 (t, J = 7.3 Hz, 3H), 1.34–1.41 (m, 2H), 1.91–2.17 (m, 4H), 2.47–2.58 (m, 2H), 4.24 (q, J = 7.3 Hz, 2H), 4.74–4.94 (m, 2H), 7.08 (d, J = 10.4 Hz, 1H), 7.32–7.35 (m, 2H), 7.87–7.92 (m, 2H).

[0106]

Example 9

(E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid

[0107]

[Chemical formula 16]

[0108]

A mixed solution of concentrated sulfuric acid (15.0 mL), acetic acid (80.0 mL) and water (48.0 mL) was added to

5 (E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid ethyl ester (9.54 g), and the mixture was stirred under heating at 98°C (internal temperature) for 6 hours. After allowed to cool, the reaction mixture was evaporated under reduced pressure. Water (80 mL) was added to the
10 residue, and the precipitate was collected by filtration and washed with water. The collected precipitate was dissolved in a saturated aqueous sodium hydrogen carbonate solution (200 mL) and washed with dichloromethane (50 mL x 2). Concentrated hydrochloric acid was added to the aqueous layer, while cooled in an ice bath, to make
15 it acidic (pH = 1), and the precipitate was collected by filtration. The collected precipitate was washed with water (100 mL) to give (E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid (7.79 g).

MS (EI) m/z: 356 (M⁺).

20 HRMS (EI) for C₁₇H₁₈F₂N₂O₄S (M⁺): calcd., 356.0894; found, 356.0870.

¹H NMR (400 MHz, CDCl₃) δ 1.05–1.10 (m, 2H), 1.30–1.41 (m, 2H),

1.91–2.19 (m, 4H), 2.46–2.62 (m, 2H), 4.76–4.94 (m, 2H), 7.24 (d, J = 11.0 Hz, 1H), 7.34–7.36 (m, 2H), 7.91–7.93 (m, 2H).

[0109]

Example 10

5 (E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-N-(thiazol-2-yl)acrylamide
(compound 1B of the present invention)

[0110]

[Chemical formula 17]

[0111]

Thionyl chloride (1.00 mL) was added to (E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylic acid (108 mg), and the mixture was heated to reflux for 1.5 hours. After the mixture was cooled to room temperature, thionyl chloride was removed by evaporation. Toluene (0.5 mL) was added to the mixture, and the resultant mixture was evaporated under reduced pressure. The obtained residue was dissolved in anhydrous tetrahydrofuran (0.4 mL). A solution of 2-aminothiazole (30.3 mg) in pyridine (0.40 mL) was added to the prepared solution cooled in a salted ice bath, and the mixture was

stirred at room temperature for 1 hour. The reaction mixture was diluted with ethyl acetate (5 mL) and washed sequentially with 1 mol/L hydrochloric acid (8 mL x 2), a saturated aqueous sodium hydrogen carbonate solution (3 mL), and saturated brine (3 mL), dried over anhydrous sodium sulfate, and filtrated, and the solvent was evaporated under reduced pressure. The obtained residue was purified by silica gel column chromatography (eluent; chloroform : acetone = 20:1), and the obtained compound was washed with diethyl ether to give (E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-N-(thiazol-2-yl)acrylamide (66.5 mg).

MS (ESI⁺) m/z: 439.1 (MH⁺).

HRMS (ESI⁺) for C₂₀H₂₁F₂N₂O₃S₂ (MH⁺): calcd., 439.09616; found, 439.09701.

¹H NMR (400 MHz, CDCl₃) δ 1.17 (ddd, J = 13.4, 6.7, 2.5 Hz, 2H), 1.45 (ddd, J = 10.4, 6.1, 1.8 Hz, 2H), 1.93–2.17 (m, 4H), 2.37–2.17 (m, 1H), 2.57 (tt, J = 8.0, 4.9 Hz, 1H), 4.73–4.94 (m, 2H), 7.03 (d, J = 3.7 Hz, 1H), 7.27 (d, J = 9.4 Hz, 1H), 7.41 (d, J = 3.67 Hz, 1H), 7.45 (dt, J = 8.6, 1.8 Hz, 2H), 8.03 (dt, J = 8.5, 1.8 Hz, 2H), 8.51 (brs, 1H).

[0112]

Example 11

Compounds 2B to 109B of the present invention were produced according to the same procedure as in Example 10.

In the following Tables, the optical rotations of the compounds

6B and 7B of the present invention were measured using methanol as a solvent, and the optical rotations of the rest of the compounds of the present invention were measured using chloroform.

[0153]

Example 17

2-[4-(2-Methoxyethylthio)phenyl]-2-oxoacetic acid ethyl ester

[0154]

[Chemical formula 24]

5 [0155]

Ethyl chloroglyoxylate (8.76 mL) was added dropwise to a suspension of aluminum chloride (13.2 g, crushed) in methylene chloride (127 mL) under stirring and cooling with ice, and (2-methoxyethyl)phenylsulfide (12.0 g) was added dropwise thereto.

10 The mixture was stirred at room temperature for 2 hours. The reaction mixture was poured into ice water (200 mL), and the mixture was stirred for 10 minutes. The organic layer was separated, washed with a saturated aqueous sodium hydrogen carbonate solution (40 mL x 3), and washed with saturated brine (60 mL). The washed organic
15 layer was dried over anhydrous sodium sulfate, filtrated, and evaporated under reduced pressure. The obtained residue was purified by column chromatography (silica gel, hexane : ethyl acetate = 4:1) to give 2-[4-(2-methoxyethylthio)phenyl]-2-oxoacetic acid ethyl ester (1.98 g).

20 ¹H NMR (400 MHz, CDCl₃) δ 1.42 (t, J = 7.0 Hz, 3H), 3.23 (t, J = 6.7 Hz, 2H), 3.39 (s, 3H), 3.65 (t, J = 6.7 Hz, 2H), 4.44 (q, J = 7.0 Hz, 2H), 7.36 (d, J = 8.6 Hz, 2H), 7.92 (d, J = 8.6 Hz, 2H).

MS (ESI⁺) m/z: 269.1 (MH⁺).

15 4 α)-3,4-difluorocyclopentyl]-2-[4-(methoxyethylthio)phenyl]acr
ylic acid ethyl ester (67 mg), and 3-[(1 α , 3 α ,
4 α)-3,4-difluorocyclopentyl]-2-[4-(methoxyethylthio)phenyl]acr
ylic acid ethyl ester (1.01 g) (a mixture of E form and Z form)
were obtained from (1 α , 3 α ,
20 4 α)-(3,4-difluorocyclopentyl)methylphosphonium iodide (3.00 g)
and 2-[4-(2-methoxyethylthio)phenyl]-2-oxoacetic acid ethyl ester
(1.51 g) obtained in Example 17. Of these compounds, only the title

compound was used in the next step.

¹H NMR (400 MHz, CDCl₃) δ 1.28 (t, J = 7.1 Hz, 3H), 1.86–2.19 (m, 4H), 2.54–2.67 (m, 1H), 3.14 (t, J = 6.7 Hz, 2H), 3.38 (s, 3H), 3.61 (t, J = 6.7 Hz, 2H), 4.22 (q, J = 7.1 Hz, 2H), 4.71–4.94 (m, 2H), 6.97 (d, J = 10.4 Hz, 1H), 7.06 (d, J = 8.6 Hz, 2H), 7.34 (d, J = 8.6 Hz, 2H).

Example 23

Ethyl 2-(5-((E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylamide}pyrazin-2-yloxy)acetate

First Step

5-(4-Methoxybenzyloxy)pyrazin-2-amine

[0172]

[Chemical formula 30]

[0173]

Sodium hydride (60% oily product) (78.8 mg) was added to 4-methoxybenzyl alcohol (2.14 mL) at a room temperature in an argon

atmosphere, and the mixture was stirred for 30 minutes under the same conditions. Next, the reaction mixture was transferred to a metal seal tube. A copper powder (146 mg) and 2-amino-5-bromopyrazine (300 mg) were added, and the resultant mixture was heated and stirred at 160°C for about 6 hours. After cooling, 25% aqueous ammonia and water were poured into the reaction solution. The reaction mixture was stirred for 1 hour at room temperature, and then filtrated through Celite. Water (20 mL) was added to the filtrate, and the resultant mixture was extracted with ethyl acetate (20 mL × 3). The organic layer was washed with saturated brine (50 mL). The washed organic layer was dried over anhydrous sodium sulfate and filtrated, and then the solvent was removed under reduced pressure. The obtained residue was purified by silica gel column chromatography (elution solvent; hexane : ethyl acetate = 3:1) to give 5-(4-methoxybenzyloxy)pyrazin-2-amine (104 mg).

¹H NMR (CHCl₃, 400 MHz) δ 3.81 (s, 3H), 4.12 (brs, 2H), 5.21 (s, 2H), 6.90 (d, J = 8.5 Hz, 2H), 7.37 (d, J = 8.5 Hz, 2H), 7.56 (d, J = 1.2 Hz, 1H), 7.79 (d, J = 1.2 Hz, 1H).

MS (EI) m/z: 231.1 (M⁺).

HRMS (EI⁺) for C₁₂H₁₃N₃O₂ (M⁺): calcd., 231.1008; found, 231.0988.
[0174]

Second Step

(E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1α, 3α, 4α)-3,4-difluorocyclopentyl]-N-[5-(4-methoxybenzyloxy)pyrazin-2-yl]acrylamide

[0175]

[Chemical formula 31]

[0176]

5 A solution of 5-(4-methoxybenzyloxy)pyrazin-2-amine (90 mg) in anhydrous pyridine (0.49 mL) was added dropwise at a room temperature in an argon atmosphere into a solution of an acid chloride (146 mg) of the (E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α ,
10 4 α)-3,4-difluorocyclopentyl]acrylamide obtained in Example 10 in anhydrous tetrahydrofuran (0.49 mL), and the resultant mixture was stirred for about 2 hours at room temperature. Ethyl acetate was added to the reaction mixture, and the mixture was then washed with a 10% citric acid aqueous solution. The organic layer was washed
15 with a saturated sodium hydrogen carbonate aqueous solution (10 mL $\times$ 2), and then washed with saturated brine (10 mL). The washed organic layer was dried over anhydrous sodium sulfate and filtrated, and then the solvent was removed under reduced pressure. The obtained residue was purified by silica gel column chromatography (elution
20 solvent; hexane : ethyl acetate = 1:1) to give (E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α ,

4 α)-3,4-difluorocyclopentyl]-N-[5-(4-methoxybenzyloxy)pyrazin-2-yl]acrylamide (160 mg).

¹H NMR (CHCl₃, 400 MHz): 1.10–1.17 (m, 2H), 1.40–1.48 (m, 2H), 1.94–2.20 (m, 4H), 2.36–2.49 (m, 1H), 2.51–2.59 (m, 1H), 3.81 (s, 3H), 4.72–4.94 (m, 2H), 5.32 (s, 2H), 6.90 (d, J = 8.5 Hz, 2H), 7.15 (d, J = 10.3 Hz, 1H), 7.38 (d, J = 8.5 Hz, 2H), 7.44 (brs, 1H), 7.46 (d, J = 8.5 Hz, 2H), 7.86 (d, J = 1.2 Hz, 1H), 8.02 (d, J = 8.5 Hz, 2H), 9.13 (d, J = 1.2 Hz, 1H).

MS (ESI⁺) m/z: 570.2 (MH⁺).

HRMS (ESI⁺) for C₂₉H₃₀F₂N₃O₅S (MH⁺): calcd., 570.18742; found, 570.18681.

[0177]

Third Step

(E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α ,

4 α)-3,4-difluorocyclopentyl]-N-(5-hydroxypyrazin-2-yl)acrylamide

[0178]

[Chemical formula 32]

[0179]

Trifluoroacetic acid (1 mL) was added at a room temperature

in an argon atmosphere to a solution of
(E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α ,
4 α)-3,4-difluorocyclopentyl]-N-[5-(4-methoxybenzyloxy)pyrazin-
2-yl]acrylamide (100 mg) in anhydrous dichloromethane (1 mL), and
5 the resultant mixture was stirred for 5 minutes. A saturated sodium
hydrogen carbonate aqueous solution was added to the reaction mixture
to adjust the pH to 8. The reaction mixture was then extracted with
chloroform (20 mL $\times$ 2). The organic layer was washed with saturated
brine (20 mL). The washed organic layer was then dried over anhydrous
10 sodium sulfate and filtrated, and then the solvent was removed under
reduced pressure. The obtained residue was purified by silica gel
column chromatography (elution solvent; chloroform : acetone = 5:1)
to give (E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α ,
4 α)-3,4-difluorocyclopentyl]-N-(5-hydroxypyrazin-2-yl)acrylami
15 de (41 mg).

^1H NMR (CHCl_3 , 400 MHz) δ 1.11–1.18 (m, 2H), 1.41–1.48 (m, 2H), 1.92–2.18
(m, 4H), 2.36–2.49 (m, 1H), 2.52–2.60 (m, 1H), 4.74–4.95 (m, 2H),
7.11 (d, J = 10.9 Hz, 1H), 7.28 (brs, 1H), 7.44 (d, J = 8.5 Hz,
2H), 7.95 (d, J = 1.2 Hz, 1H), 8.03 (d, J = 8.5 Hz, 2H), 8.48 (d,
20 J = 1.2 Hz, 1H).

MS (ESI^+) m/z : 450.1 (MH^+).

HRMS (ESI^+) for $\text{C}_{21}\text{H}_{22}\text{F}_2\text{N}_3\text{O}_4\text{S}$ (MH^+): calcd., 450.12991; found,
450.12959.

[0180]

25 Fourth Step

Ethyl 2-(5-{(E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α ,
4 α)-3,4-difluorocyclopentyl]acrylamide}pyrazin-2-yloxy)acetate

[0181]

[Chemical formula 33]

5

[0182]

Ethyl bromoacetate (74 μ L) and silver oxide (92.9 mg) were added at a room temperature in an argon atmosphere to a solution of (E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-N-(5-hydroxypyrazin-2-yl)acrylamide (150 mg) in anhydrous toluene (5 mL), and the resultant mixture was heated and stirred for about 22 hours at 100°C in an argon atmosphere. The reaction mixture was cooled, and then filtrated through Celite. After filtration, the solvent was removed under reduced pressure. The obtained residue was purified by silica gel column chromatography (elution solvent; chloroform : acetone = 5:1) to give ethyl 2-(5-{(E)-2-[4-(cyclopropylsulfonyl)phenyl]-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylamide}pyrazin-2-yloxy)acetate (35 mg). [0186]

Reference Example 1

10 (1 α , 3 α , 4 α)-3,4-Difluorocyclopentylmethyltriphenylphosphonium iodide

First step

[(1 α , 3 β , 4 β)-3,4-Dihydroxycyclopentyl]methyl benzoate

[0187]

15 [Chemical formula 35]

[0166]

N-methylmorpholine N-oxide (a 50% aqueous solution, 22.0 mL) and osmium tetroxide (a 2.5% t-butanol solution, 1.90 mL) were dissolved in acetone (190 mL). A solution of (3-cyclopenten-1-yl)methyl benzoate (WO93/18009, Japanese Translation of PCT International Application No. Hei 7-506816) (20.2

g) in acetone (125 mL) was added dropwise to the prepared solution over 105 minutes under stirring, and the mixture was stirred at room temperature for 15 hours. Chloroform (310 mL) and water (190 mL) were added to the reaction mixture, and the organic layer was collected. The collected organic layer was washed sequentially with 1 mol/L hydrochloric acid (2×90 mL), water (90 mL), and a saturated aqueous sodium hydrogen carbonate solution (60 mL), dried over anhydrous sodium sulfate, and concentrated under reduced pressure. Toluene (120 mL) was added to the residue, and the precipitated crystals were collected by filtration to give [(1 α , 3 β , 4 β)-3,4-dihydroxycyclopentyl]methyl benzoate (16.9 g).

¹H NMR (CDCl₃) δ 1.71–1.78 (m, 2H), 1.95–2.02 (m, 2H), 2.27 (br, 2H), 2.75–2.87 (m, 1H), 4.19–4.23 (m, 4H), 7.43–7.47 (m, 2H), 7.55–7.59 (m, 1H), 8.01–8.04 (m, 2H).

The filtrate was concentrated under reduced pressure to give a mixture of [(1 α , 3 β , 4 β)-3,4-dihydroxycyclopentyl]methyl benzoate and [(1 β , 3 β , 4 β)-3,4-dihydroxycyclopentyl]methyl benzoate (4.23 g, a ratio of about 1:2 determined by the integration ratio of ¹H NMR).

¹H NMR (CDCl₃) δ 1.58–1.65 (m, 1.3H), 1.71–1.78 (m, 0.7H), 1.96–2.17 (m, 2H), 2.75–2.85 (m, 1H), 4.09–4.32 (m, 4H), 7.42–7.46 (m, 2H), 7.54–7.59 (m, 1H), 8.01–8.06 (m, 2H).

[0189]

Second step

(3a α , 5 α ,

6a α)-(Tetrahydro-4H-cyclopenta-1,3,2-dioxathiol-5-yl)methyl

benzoate S,S-dioxide

[0190]

[Chemical formula 36]

5 [0191]

[(1 α , 3 β , 4 β)-3,4-Dihydroxycyclopentyl]methyl benzoate (5.00 g) was suspended in carbon tetrachloride (75 mL). Thionyl chloride (1.90 mL) was added to the suspension, and the mixture was heated for reflux under stirring for 1.5 hours. Thionyl chloride (0.50 mL) was further added to the reaction mixture, and the mixture was heated for reflux under stirring for 1 hour. The reaction mixture was concentrated under reduced pressure, and toluene (25 mL) was added to the residue. The mixture was concentrated under reduced pressure and dried under reduced pressure to give (3a α , 5 α , 6a α)-(tetrahydro-4H-cyclopenta-1,3,2-dioxathiol-5-yl)methyl benzoate S-oxide (6.09 g). The obtained (3a α , 5 α , 6a α)-(tetrahydro-4H-cyclopenta-1,3,2-dioxathiol-5-yl)methyl benzoate S-oxide (4.27 g) was mixed with acetonitrile (30 mL) and carbon tetrachloride (30 mL). Sodium periodate (6.46 g), ruthenium chloride hydrate (31.3 mg), and then water (30 mL) were added to the mixture, and the resultant mixture was stirred at room temperature for 30 minutes. Dichloromethane (50 mL) was added to the reaction

mixture, and insoluble materials were removed by filtration. Then, the organic layer of the filtrate was separated, and the aqueous layer was extracted with dichloromethane (50 mL). The organic layer and the dichloromethane extract were combined. The combined solution was washed with a 1 mol/L aqueous sodium thiosulfate solution (2 x 40 mL) and then with water (2 x 40 mL), dried over anhydrous sodium sulfate, and concentrated under reduced pressure. The residue was dried under reduced pressure to give (3a α , 5 α , 6a α)-(tetrahydro-4H-cyclopenta-1,3,2-dioxathiol-5-yl)methyl benzoate S,S-dioxide (4.35 g).

MS (CI⁺) m/z: 299 (MH⁺).

HRMS (CI⁺) for C₁₃H₁₅O₆S (MH⁺): calcd., 299.0589; found, 299.0593.

[0192]

Third step

[(1 α , 3 α , 4 β)-3-Fluoro-4-hydroxycyclopentyl]methyl benzoate

[0193]

[Chemical formula 37]

[0194]

Tetrabutylammonium fluoride hydrate (571 mg) was dissolved in anhydrous acetonitrile (5 mL), and the prepared solution was concentrated under reduced pressure. The same procedure was

repeated additional two times, and the residue was dried under reduced pressure at 40°C for 45 minutes. The resultant residue was dissolved in dehydrated acetonitrile (5 mL). (3a α , 5 α , 6a α)-(Tetrahydro-4H-cyclopenta-1,3,2-dioxathiol-5-yl)methyl benzoate S,S-dioxide (500 mg) was added to the prepared solution, and the mixture was heated to reflux under stirring for 45 minutes. Then, the reaction mixture was concentrated under reduced pressure. The residue was dissolved in ethanol (5 mL), and sulfuric acid (0.15 mL) was added thereto. The mixture was heated to reflux under stirring for 10 minutes, and the reaction mixture was concentrated under reduced pressure. The residue was dissolved in ethyl acetate (40 mL). The resultant solution was washed with a saturated aqueous sodium hydrogen carbonate solution (5 mL) and then with saturated brine (5 mL), dried over anhydrous sodium sulfate, and concentrated under reduced pressure. The residue was purified by silica gel column chromatography (eluent : hexane/ethyl acetate = 1:1) to give [(1 α , 3 α , 4 β)-3-fluoro-4-hydroxycyclopentyl]methyl benzoate (342 mg). MS (EI) m/z: 238 (M⁺).

HRMS (EI) for C₁₃H₁₅FO₃ (M⁺): calcd., 238.1005; found, 238.1046.

[0195]

Fourth step

[(1 α , 3 α , 4 α)-3,4-Difluorocyclopentyl]methyl benzoate

[0196]

[Chemical formula 38]

[0197]

[(1 α , 3 α , 4 β)-3-fluoro-4-hydroxycyclopentyl]methyl benzoate (326 mg) was dissolved in anhydrous tetrahydrofuran (5 mL). A solution of bis(2-methoxyethyl)aminosulfur trifluoride (455 mg) in anhydrous tetrahydrofuran (2 mL) was added to the prepared mixture, and the mixture was heated to reflux under stirring for 1.5 hours. The reaction mixture was added to a saturated aqueous sodium hydrogen carbonate solution (10 mL), and the resultant solution was extracted with ethyl acetate (2 x 30 mL). The ethyl acetate extracts were combined, washed with saturated brine (2 x 10 mL), dried over anhydrous sodium sulfate, and concentrated under reduced pressure. The residue was purified by silica gel column chromatography (eluent : hexane/ethyl acetate = 4:1) to give [(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]methyl benzoate (233 mg).

MS (CI⁺) m/z: 241 (MH⁺).

HRMS (CI⁺) for C₁₃H₁₅F₂O₂(MH⁺): calcd., 241.1040; found, 241.1043.

[0198]

Fifth step

20 [(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]methanol

[0199]

[Chemical formula 39]

[0200]

[(1 α , 3 α , 4 α)-3,4-Difluorocyclopentyl]methyl benzoate (221 mg) was dissolved in ethanol (3 mL). A solution of potassium carbonate (191 mg) in water (1 mL) was added to the prepared solution, and the mixture was heated to reflux under stirring for 4 hours. The reaction mixture was concentrated under reduced pressure, and the residue was purified by silica gel column chromatography (eluent : hexane/ethyl acetate = 1:2) to give [(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]methanol (123 mg).

MS (CI⁺) m/z: 137 (MH⁺).

HRMS (CI⁺) for C₆H₁₁F₂O (MH⁺): calcd., 137.0778; found, 137.0801.

[0201]

Sixth step

(1 α , 3 α , 4 α)-3,4-Difluorocyclopentylmethyl iodide

[0202]

[Chemical formula 40]

[0203]

Iodine (120 mg) was added to a solution of imidazole (64.5 mg) and triphenylphosphine (124 mg) in dichloromethane (2.0 mL)

under cooling with ice, and the mixture was stirred at room temperature for 30 minutes. Then, a solution of [(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]methanol (43.0 mg) in dichloromethane (0.5 mL) was added to the resultant mixture, and the mixture was stirred at room temperature for 4 hours, and insoluble materials were removed by filtration. The residue obtained by concentrating the filtrate was purified by silica gel column chromatography to give (1 α , 3 α , 4 α)-3,4-difluorocyclopentylmethyl iodide (28.0 mg). MS (EI) m/z: 246 (M⁺).

HRMS (EI) for C₆H₉F₂I (M⁺): calcd., 245.9717; found, 245.9741.
[0204]

Seventh step

(1 α , 3 α , 4 α)-(3,4-Difluorocyclopentyl)methyltriphenylphosphonium iodide

[0205]

[Chemical formula 41]

[0206]

(1 α , 3 α , 4 α)-(3,4-difluorocyclopentyl)methyl iodide (9.84 g), triphenylphosphine (12.6 g), and acetonitrile (3 mL) were mixed and stirred at 90 to 95°C for 4 hours. Acetonitrile (2 mL) was further added to the reaction mixture, and the mixture was further stirred at 90 to 95°C for 20 hours. After cooling, diethyl ether (50 mL)

was added to the reaction mixture, and the precipitated crystals were collected by filtration. The collected crystals were suspended in diethyl ether (50 mL), and the suspension was filtrated to collect the crystals. The collected crystals were washed with an appropriate amount of diethyl ether and dried under reduced pressure to give the title compound (20 g).

¹H NMR (400 MHz, CDCl₃) δ 1.72–1.85 (m, 2H), 2.17–2.29 (m, 2H), 2.69–2.82 (m, 1H), 3.86 (dd, J = 7.3, 2.4 Hz, 1H), 3.89 (dd, J = 7.3, 2.4 Hz, 1H), 4.74–4.92 (m, 2H), 7.31–7.90 (m, 15H).

[0207]

Reference Example 2

2-(5-Aminopyrazin-2-ylthio)ethanol

[0208]

[Chemical formula 42]

[0209]

According to the method described in W02004/052869, 2-hydroxy-1-ethanethiol (0.93 mL) and tetrakis(triphenylphosphine)palladium (3.39 g) were added to a solution of 2-amino-5-bromopyrazine (1.00 g, 5.75 mmol) in N,N-dimethylformamide (15.1 mL), and the mixture was heated and stirred at 120°C in a sealed tube for about 3 hours. After cooling, the reaction mixture was diluted with water and extracted with a mixed solution (dichloromethane : ethanol = 5:1) (100 mL x 6). The

organic layer was dried over anhydrous sodium sulfate and then
filtrated, and the solvent was evaporated under reduced pressure.
The residue was purified by column chromatography (hexane : ethyl
acetate = 1:1, then ethyl acetate, and then ethyl acetate : methanol
5 = 10:1) and was recrystallized (using chloroform) to give the title
compound as yellow needle crystals (470 mg, yield: 44%).

MS (EI⁺) m/z: 171 (M⁺).

HRMS (EI⁺) for C₆H₉N₃OS (M⁺): calcd., 171.0466; found, 171.0451.

[0210]

10 Reference Example 3

5-[2-(Methylthio)ethoxy]pyrazin-2-amine

[0211]

[Chemical formula 43]

15 [0212]

According to the method described in WO2007007886, sodium
hydride (50% oily product) (314 mg) was added to methylthioethanol
(7.88 mL) under cooling with ice and stirring, and then copper (490
mg) and 2-amino-5-bromopyrazine (1.00 g) were added thereto. The
20 reaction mixture was placed in an autoclave and heated and stirred
at 160°C for about 5 hours. After cooling, the reaction mixture
was diluted with water (50 mL) and ethyl acetate (50 mL), and 25%
aqueous ammonia (2 mL) was added to the mixture to make it basic.
The reaction mixture was filtrated through Celite, and the organic

layer and the aqueous layer were separated. The aqueous layer was extracted with ethyl acetate (50 mL x 2), and the extracts and the organic layer were combined, dried over anhydrous sodium sulfate, and filtrated. The solvent was evaporated under reduced pressure.

5 The residue was purified by silica gel chromatography (hexane : ethyl acetate=1:1) and then by preparative TLC (chloroform : methanol = 10:1, then NH silica gel, hexane : acetone = 3:1) to give the title compound as white powder crystals (59.2 mg, yield: 6%).

MS (EI⁺) m/z: 185 (M⁺).

10 HRMS (EI⁺) for C₇H₁₁N₃OS (M⁺): calcd., 185.0623; found, 185.0613.
[0213]

Reference Example 4

5-(2-Ethoxyethoxy)pyrazin-2-amine

[0214]

15 [Chemical formula 44]

[0215]

According to the method described in Reference Example 3, the title compound was obtained as yellow crystals (1.50 g, yield: 41%)

20 from 2-amino-5-bromopyrazine (3.48 g) and ethoxyethanol (36.0 g).

MS (EI⁺) m/z: 183 (M⁺).

[0225]

5 Reference Example 8

1-[2-(Dimethylamino)-2-methylpropyl]-1H-pyrazol-3-amine

[0226]

[Chemical formula 48]

10 [0227]

Sodium hydride (156 mg) was added to a solution of 3-nitro-1H-pyrazole (196 mg) in anhydrous DMF (2 mL) under cooling with ice, and the mixture was stirred at room temperature for 15 minutes. A solution of 1-chloro-N,N,2-trimethylpropan-2-amine in 15 DMF (0.52 mL) was added to the resultant mixture, and the mixture was stirred at room temperature for about 24 hours. A saturated aqueous ammonium chloride solution (25 mL) and ethyl acetate (25 mL) were added to the reaction mixture and stirred under cooling with ice. The organic layer was separated, washed with saturated 20 brine (100 mL), dried over anhydrous sodium sulfate, and filtrated, and the filtrate was concentrated under reduced pressure. The obtained residue was purified by silica gel column chromatography (neutral spherical silica gel, ethyl acetate : hexane = 1:1) to give N,N,2-trimethyl-1-(3-nitro-1H-pyrazol-1-yl)propan-2-amine

as yellow powder crystals (90.9 mg, yield: 25%).

MS (CI) m/z: 213 (MH⁺).

HRMS (CI) for C₉H₁₇N₄O₂ (MH⁺): calcd, 213.1352; found, 213.1314.

N,N,2-trimethyl-1-(3-nitro-1H-pyrazol-1-yl)propan-2-amine
5 (70.6 mg) was dissolved in a mixed solution (ethanol-ethyl acetate,
4:1, 5 mL). Then, 10% palladium-carbon (7 mg) was added to the
prepared solution, and the solution was subjected to catalytic
reduction at 101 kPa for about 2 hours. The reaction mixture was
filtrated through Celite, and the filtrate was evaporated under
10 reduced pressure. The obtained residue was purified by silica gel
column chromatography (silica gel NH, ethyl acetate : hexane = 1:1)
to give the title compound as a yellow oil (56.8 mg, yield: 94%).

MS (CI) m/z: 183 (MH⁺).

HRMS (CI) for C₉H₁₄N₄ (MH⁺): calcd., 183.1610; found, 183.1615.

Reference Example 11

5 5-[2-(4-Methylpiperazin-1-yl)ethylthio]thiazol-2-amine

[0234]

[Chemical formula 51]

[0235]

10 1-Methylpiperazine (3.47 mL) was added to the compound obtained
in Reference Example 9 (150 mg), and the mixture was heated and
stirred at 60°C for 2 hours. After cooling, the reaction mixture
was concentrated under reduced pressure. Methylene chloride (10
mL) and a saturated aqueous sodium hydrogen carbonate solution (10
15 mL) were added to the residue, and the mixture was extracted. The
extraction was repeated twice, and the combined organic layers were
washed with saturated brine (7 mL), dried over anhydrous sodium
sulfate, filtrated, and evaporated under reduced pressure. The
obtained amorphous was washed with diisopropyl ether to give the
20 title compound as white powder crystals (137 mg, yield: 84%).

Melting point 106–108°C

(S)-1-[2-(2-Aminothiazol-5-ylthio)ethyl]pyrrolidine-2-carboxyl

ic acid methyl ester

[0257]

[Chemical formula 59]

[0258]

According to the method described in Reference Example 11, the title compound was obtained as a yellow oil (85.7 mg, yield: 36%) from the compound obtained in Reference Example 9 (200 mg), (S)-pyrrolidine-2-carboxylic acid methyl ester hydrochloride (277 mg), and triethylamine (0.50 mL).

[α]_D²⁵ -85° (c0.25, CHCl₃).

MS (CI) m/z: 288 (MH⁺).

IR (ATR): 1647, 1514, 1493 cm^{-1} .

20 [0265]

Reference Example 22

Ethyl (Z)-3-(1 α , 3 α , 4 α)-3,4-(difluorocyclopentyl)acrylate

[0266]

[Chemical formula 62]

[0267]

Lithium bis(trimethylsilyl)amide (a 1 mol/L tetrahydrofuran solution, 41.1 mL, 41.1 mmol) was added in an argon atmosphere at 4°C to a solution of the [(1 α , 3 α , 4 α)-(3,4-difluorocyclopentyl)methyl]triphenylphosphonium iodide (20.3 g, 40 mmol) synthesized in Reference Example 1 in anhydrous tetrahydrofuran (70 mL), and the resultant mixture was stirred for 1 hour at about the same temperature. Next, a solution of ethyl glyoxylate (4.24 g, 41.5 mmol) in anhydrous tetrahydrofuran (50 mL) was added at 4°C, and the resultant mixture was stirred at room temperature for 24 hours. Next, water (20 mL) was added at 4°C, then 1 mol/L hydrochloric acid aqueous solution was added, and the organic layer was concentrated under reduced pressure. The obtained residue was extracted with ethyl acetate. The organic layer was washed with saturated brine. The washed organic layer was dried over anhydrous sodium sulfate, and then concentrated under reduced pressure. The obtained residue was isolated and purified by silica gel column chromatography (ethyl acetate : hexane = 1:4) to give 5.25 g of the title compound as a pale yellow oily substance.

MS (EI⁺) m/z: 204 (M⁺).

HRMS (EI⁺) for C₁₀H₁₄F₂O₂ (M⁺): calcd., 204.0962; found, 204.0942.

¹H NMR (400 MHz, CDCl₃) δ 1.29 (t, J = 7.1 Hz, 3H), 1.74–1.90 (m, 2H),

2.26–2.42 (m, 2H), 3.84–3.98 (m, 1H), 4.16 (q, J = 7.1 Hz, 2H),
4.80–4.90 (m, 1H), 4.92–5.02 (m, 1H), 5.74 (dd, J = 11.6, 1.2 Hz, 1H),
6.22 (dd, J = 11.0, 9.8 Hz, 1H).

[0268]

5 Reference Example 23

Ethyl (Z)-2-bromo-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylate

[0269]

[Chemical formula 63]

10

[0270]

Bromine (1.19 mL, 23.2 mmol) was added in an argon atmosphere
at -6°C to a solution of the compound (5.00 g, 24.5 mmol) of Reference
Example 22 in carbontetrachloride (15 mL), and the resultant mixture
15 was then stirred for 7 hours at room temperature. The reaction
mixture was concentrated under reduced pressure, and anhydrous
dichloromethane (40 mL) was added to the obtained residue. Next,
in an argon atmosphere, triethylamine (4.10 mL, 29.4 mmol) was added
at 4°C, and the resultant mixture was stirred for 12 hours at room
20 temperature. Water was added to the reaction mixture, whereby
separate layers formed. Then, the aqueous layer was extracted with
dichloromethane, and the obtained organic layers are collected.

The combined mixture was washed with 1 mol/L hydrochloric acid aqueous solution, and then washed with saturated brine. The washed mixture was dried over anhydrous sodium sulfate, and then concentrated under reduced pressure. The obtained residue was isolated and purified by silica gel column chromatography (ethyl acetate : hexane = 1:5) to give 7.33 g of the title compound as a colorless oily substance. MS (EI⁺) m/z: 282 (M⁺).

HRMS (EI⁺) for C₁₀H₁₃BrF₂O₂ (M⁺): calcd., 282.0067; found, 282.0081.

¹H NMR (400 MHz, CDCl₃) δ 1.34 (t, J = 7.3 Hz, 3H), 1.86–2.02 (m, 2H), 2.28–2.44 (m, 2H), 3.08–3.20 (m, 1H), 4.29 (q, J = 7.3 Hz, 2H), 4.84–4.94 (m, 1H), 4.96–5.06 (m, 1H), 7.29 (d, J = 9.2 Hz, 1H). [0271]

Reference Example 24

Ethyl (E)-3-[(1α, 3α,

4α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]acrylate

[0272]

[Chemical formula 64]

[0273]

Pinacolato diboron (88.0 mg, 0.35 mmol),

1,1-bis(diphenylphosphino)ferrocene-palladium(II) dichloride (8 mg), and potassium acetate (98.0 mg, 1.00 mmol) were added to a solution of 4-bromomethylsulfonylbenzene (79.0 mg, 0.33 mmol) in dimethylformamide (1 mL), and the resultant mixture was stirred
5 in an argon atmosphere for 80 minutes at 120°C. Next, ethyl (Z)-2-bromo-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]acrylate (100.0 mg, 0.33 mmol),

1,1-bis(diphenylphosphino)ferrocene-palladium(II) dichloride (10 mg), and 2 mol/L sodium carbonate aqueous solution (1 mL) were added,
10 and the resultant mixture was stirred in an argon atmosphere for 2 hours at 80°C. Water was added to the reaction mixture. Extraction was carried out with ethyl acetate, and the organic layer was washed with water and then saturated brine. The washed organic layer was dried over anhydrous sodium sulfate, and then concentrated under
15 reduced pressure. The obtained residue was isolated and purified by silica gel column chromatography (ethyl acetate : hexane = 1:1) to give 39.3 g of the title compound.

[0274]

Reference Example 25

20 (E)-3-[(1 β , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]-N-(thiozol-2-yl)acrylamide (Comparative Compound 1)

[0275]

[Chemical formula 65]

[0276]

Using the [(1 β , 3 β , 4 β)-3,4-dihydroxycyclopentyl]methyl benzoate obtained in the first step of Reference Example 1, the same reactions as in the second to seventh steps of Reference Example 1 were carried out to synthesize (1 β , 3 α , 4 α)-(3,4-difluorocyclopentyl)methyltriphenylphosphonium iodide. Further, the conversions of from Example 1 to Example 5 were carried out to obtained the title compound.

[0277]

Reference Example 26

(E)-3-[(3 α , 4 β)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]-N-(thiozol-2-yl)acrylamide (Comparative Compound 2), and

(E)-3-[(3 β , 4 α)-3,4-difluorocyclopentyl]-2-[4-(methylsulfonyl)phenyl]-N-(thiozol-2-yl)acrylamide (Comparative Compound 3)

[0278]

[Chemical formula 66]

[0279]

Using the [(1 α , 3 α , 4 β)-3-fluoro-4-hydroxycyclopentyl]methyl benzoate obtained in the third step of Reference Example 1,

5 stereoinversion based on a Mitsunobu reaction of a hydroxyl group was carried out, followed by the same fluorination as in the fourth step of Reference Example 1. Then, the resultant product underwent hydrolysis of the ester group, and oxidation of the hydroxymethyl group to convert the product into a carboxylic acid. This carboxylic acid was condensed with (S)-4-phenyloxazolidinone, the diastereomer was then separated, the asymmetric auxiliary group was removed, the resultant product was then reduced to methanol compound, and the reactions of from the sixth and subsequent steps of Reference Example 1 were carried out in order to obtain the title compound.

[0280]

Test Example 1

GK activity measurement

The GK activity was determined not by direct measurement of the amount of glucose-6-phosphate produced by the enzyme reaction but by measurement of the amount of NADH produced by a glucose-6-dehydrogenase-coupled reaction.

[0281]

(Preparation of recombinant GK)

Cloning of human hepatic GK and human pancreas GK and acquisition of recombinant proteins

5 Based on a human hepatic GK sequence available from GeneBank (Accession Number: NM_033507) and a human pancreas GK sequence (Accession Number: NM_000162), PCR cloning was performed using Pyrobest DNA Polymerase (product of Takara Bio Inc.) with human hepatic cDNA (product of Clontech Laboratories, Inc.) and human
10 pancreas cDNA (product of Clontech Laboratories, Inc.) used as templates. The enzymes were expressed in a soluble form in *E. coli* as His-tagged fusion proteins (tagged with six His residues at the C-terminus. The *E. coli* cells were sonicated and centrifuged, and the supernatant was collected. The collected supernatant was
15 purified by metal chelate affinity chromatography.

[0282]

After purification, the enzymes were stored in 12.5 mM HEPES (pH 7.3), 75 mM KCl, 0.5 mM MgCl₂, 0.5 mM DTT, 2.5 mM glucose, and 50% glycerol at -80°C.

20 [0283]

(Measurement of GK activity)

The assay was performed at 25°C using a half-area flat-bottom 96-well plate (product of Costar). The incubation mixture was prepared such that the final mixture contained a 25 mM HEPES buffer
25 solution (pH 7.1) (product of Invitrogen Corporation), 25 mM KCl

(product of Wako Pure Chemical Industries, Ltd.), 2 mM MgCl₂ (product of Wako Pure Chemical Industries, Ltd.), 5 mM D-glucose (product of Wako Pure Chemical Industries, Ltd.), 1 mM ATP (product of Roche), 1 mM NAD (product of Sigma), 1 mM dithiothreitol (product of Wako Pure Chemical Industries, Ltd.), 5 Unit/mL G6PDH (product of Sigma), 0.1% BSA (product of Sigma), GK, and a test compound or 5% DMSO.

[0284]

The test compound was dissolved in DMSO in advance, and 2 μ L of the prepared solution was added to 20 μ L of a solution containing the HEPES buffer solution (pH 7.1), KCl, MgCl₂, D-glucose, ATP, NAD, and dithiothreitol. Subsequently, 18 μ L of a solution containing the G6PDH, BSA, and recombinant GK was added to the mixture to initiate the reaction. The GK was added such that an increase in absorbance per minute in the presence of 5% DMSO was between 0.002 to 0.003.

After the reaction was initiated, the increase in absorbance at 340 nm was measured for 15 minutes using a SPECTRAmax 190 microplate spectrophotometer (product of Molecular Devices Corporation), and the activity was evaluated using the increase in the first 10 minutes.

[0285]

When the compounds 1A, 26A, 27A, 31A, 44A, 49A, 1B, 2B, 4B, 31B, 38B, 41B, 53B, 21B, and 26B of the present invention were added in an amount of 10 μ M, the effect of activating the human hepatic GK was found to be 200% or more that of a well not containing the compounds. Especially, in the compound 1A of the present invention, EC₅₀ was shown to be 1 μ M or less. On the other hand, in the comparative

compound 1-3, each EC₅₀ found to be more than 10 μ M.

[0286]

Test Example 2

Hypoglycemia activity test

5 The effects of the test compounds on blood glucose levels were measured using ICR mice (male, 7 to 9 weeks of age, Charles River Laboratories Japan, Inc.). Each of the compounds was dissolved in a mixture of Gelucire 44/14 (trade name, product of Gattefosse) and PEG 400 (60:40), and was orally administered to the animal after
10 2-hour fasting period (30 mg/kg, 10 mL/kg). Blood was collected from the caudal vein immediately before the administration (Pre value) and 0.5, 2, and 4 hours after the administration using a blood-collecting tube coated with dipotassium
ethylenediaminetetraacetate and was centrifuged (4°C, 3,600 x g,
15 3 minutes) to obtain a plasma sample.

[0287]

Each sample was diluted five-fold with physiological saline, and the blood glucose level was measured using Glucose CII-Test Wako (trade name, product of Wako Pure Chemical Industries, Ltd.).
20 More specifically, the samples and a glucose standard solution (100 mg/dL) (obtained by diluting a glucose standard solution (200 mg/dL) two-fold with physiological saline) were placed in the wells of a flat-bottom 96-well plate in an amount of 10 μ L/well, and 150 μ L of a color reagent was added to each well. The plate was left to
25 stand at 37°C for 5 minutes to allow color development. The

measurement of OD at 505 nm was performed using En Vision 2103 Multilabel Reader (trade name, product of PerkinElmer Inc.). The reduction ratio of the blood glucose level at each sampling point relative to the Pre value was determined, and a glucose reduction ratio (the average of the determined reduction ratios) was computed.

[0288]

In the compounds 1A, 26A, 27A, 31A, 44A, 1B, 2B, 11B, 12B, 21B, 26B, 62A, 31B, 79B, 103B, 108B, 4B, 38B, 53B, 46A, 58A, and 41B of the present invention, the glucose reduction ratio was found to be 35% or more. Especially, in the compound 1A of the present invention, the reduction ratio was shown to be 50% or more. On the other hand, in the comparative compound 1-3, the each reduction ratio found to be less than 30%.

[0289]

Test Example 3

Dosage Dependence of Hypoglycemia and Insulin Secretion Promotion Tests

The effects of the test compounds on blood glucose levels and insulin secretion were measured using ICR mice (male, 7 to 9 weeks of age, Charles River Laboratories Japan, Inc.). Each of the compounds was dissolved in a mixture of Gelucire 44/14 (trade name, product of Gattefosse) and PEG 400 (60:40), and was orally administered to the animal after a 2-hour fasting period (30 mg/kg, 10 mL/kg). Blood was collected from the caudal vein immediately before the administration (Pre value) and 0.5, 1, 2, and 4 hours

after the administration using a blood-collecting tube coated with dipotassium ethylenediaminetetraacetate and was centrifuged (4°C, 3,600 × g, 3 minutes) to obtain a plasma sample.

Each sample was diluted five-fold with physiological saline, and the blood glucose level was measured using Glucose CII-Test Wako (trade name, product of Wako Pure Chemical Industries, Ltd.). More specifically, the samples, physiological saline, and a glucose standard solution (100 mg/dL) (obtained by diluting a glucose standard solution (200 mg/dL) two-fold with physiological saline) were placed in the wells of a flat-bottom 96-well plate in an amount of 10 µL/well, respectively, and 150 µL of a color reagent was added to each well. The plate was left to stand at 37°C for 5 minutes to allow color development. The measurement of OD at 505 nm was performed using En Vision 2103 Multilabel Reader (trade name, product of PerkinElmer Inc.). The glucose area under the curve_{0.5 - 4 hr} (Glucose AUC_{0.5 - 4 hr}) was calculated from the blood glucose level at each blood collection point.

The insulin concentration was measured using an undiluted solution of each sample with a Morinaga insulin measurement kit (trade name, product of Morinaga Institute of Biological Science Inc.). The insulin area under the curve_{0.5 - 4 hr} (Insulin AUC_{0.5 - 4 hr}) was calculated from the insulin level at each blood collection point.

[0290]

Test Example 4

Effects on Abnormal Glucose Tolerance of Severe Diabetes db/db Mice

The effects on the abnormal glucose tolerance of severe diabetes db/db mice were tested by a method based on the Fyfe method (Diabetologia. 2007 Jun; 50 (6): 1277-87). The effects of the test compounds on abnormal glucose tolerance were measured using db/db mice (male, 7 weeks of age, Charles River Laboratories Japan, Inc.). Each of the compounds was dissolved in a mixture of Gelucire 44/14 (trade name, product of Gattefosse) and PEG 400 (60:40), and was orally administered to the animal after a 16 to 20-hour fasting period. A glycaemic load was applied by administering a 5 g/kg glucose solution 1 hour after administration of the drug solution. Blood was collected from the caudal vein 1 hour before the drug solution administration, before the glycaemic load, and 0.25, 0.5, 1, 2, and 4 hours after the glycaemic load using a blood-collecting tube coated with dipotassium ethylenediaminetetraacetate and was centrifuged to obtain a plasma sample. Each sample was diluted ten-fold with physiological saline, and the blood glucose level was measured using Glucose CII Kit (trade name, product of Wako Pure Chemical Industries, Ltd.). The blood glucose level AUC 0.25 to 4 hours after glycaemic load was calculated as the "Blood glucose after glycaemic load".

EC₅₀ and ED₅₀ were calculated using the test compound blood concentration (C_{max}) and the dosage amount on the basis of the blood glucose rate of decrease for each group as an index of drug efficacy when the data for the control group was taken as 0.

[0291]

Test Example 5

hERG Current Suppression Test

Using a HEK 293 cell transfected with a human ether-a-go-go-related gene (hERG), the hERG current which passed through the whole cell membrane under a voltage clamp was recorded by a whole-cell patch clamp method. To confirm the hERG current of the cell, a depolarization pulse was periodically applied while maintaining the membrane potential at -80 mV. After the generated current stabilized, the cell was perfused with a perfusate (applying solution) in which the test substance was dissolved for 10 minutes. The effects of the test substance on the hERG channel were evaluated on the basis of the change in the tail current induced by a +20 mV depolarization pulse for 1.5 seconds followed by another depolarization pulse of -50 mV for 1.5 seconds. Stimulation was performed at a frequency of once every 10 seconds. The test was carried out at 34°C. The absolute value of the maximum tail current was determined on the basis of the current value at the maintained membrane potential, and the rate of change (suppression rate) 10 minutes after application in the maximum tail current from before application of the test substance was calculated.

The hERG when 30 μ M of the inventive compounds 1A, 12A, 44A, 18B, 31B, 41B, 71B, 103B, 4B, 31A, 38B, and 68B was 50% or less in all cases.

INDUSTRIAL APPLICABILITY

[0292]

The glucokinase activators of the present invention have an excellent GK activating or hypoglycemic effect and few side effects (such as Q-T interval prolongation (relating to hERG current suppression) and insulin-induced hypoglycemia) and are therefore
5 useful as pharmaceuticals for the treatment or prevention of diabetes, obesity, and the like.

CLAIMS

1. A compound represented by the general formula (1) or a pharmaceutically acceptable salt thereof:

5 [Chemical formula 1]

(wherein R^1 and R^2 are each independently a hydrogen atom, a halogen atom, an amino group, a hydroxyl group, a hydroxyamino group, a nitro group, a cyano group, a sulfamoyl group, a C_1 to C_6 alkyl group, a C_1 to C_6 alkoxy group, a C_1 to C_6 alkylsulfanyl group, a C_1 to C_6 alkylsulfinyl group, a C_1 to C_6 alkylsulfonyl group, or a C_1 to C_6 alkoxy- C_1 to C_6 alkylsulfonyl group, and A is a substituted or unsubstituted heteroaryl group).

2. The compound according to claim 1 or a pharmaceutically acceptable salt thereof, wherein R^1 and R^2 are each independently a hydrogen atom, a halogen atom, or a C_1 to C_6 alkylsulfonyl group.

3. The compound according to claim 1 or a pharmaceutically acceptable salt thereof, wherein R^1 is a hydrogen atom or a halogen atom, and R^2 is a C_1 to C_6 alkylsulfonyl group.

4. The compound according to claim 1 or a pharmaceutically acceptable salt thereof, wherein R^1 is a hydrogen atom and R^2 is a C_1 to C_6 alkylsulfonyl group.

5. The compound according to claim 1 or a pharmaceutically acceptable salt thereof, wherein R^1 is a hydrogen atom, and R^2 is a cyclopropylsulfonyl group.

6. The compound according to claim 1 or a pharmaceutically acceptable salt thereof, wherein R^1 is a hydrogen atom, and R^2 is a methylsulfonyl group.

7. The compound according to any of claims 1 to 6 or a pharmaceutically acceptable salt thereof, wherein the compound is represented by the general formula (1a):

[Chemical formula 2]

(wherein R^1 , R^2 , and A are as defined above).

8. The compound according to any of claims 1 to 6 or a pharmaceutically acceptable salt thereof, wherein the compound is represented by the general formula (1b):

[Chemical formula 3]

(wherein R^1 , R^2 , and A are as defined above).

9. The compound according to any of claims 1 to 8 or a pharmaceutically acceptable salt thereof, wherein A is an unsubstituted heteroaryl group or a heteroaryl group that is mono-substituted with a halogen atom, a C_1 to C_6 alkyl group optionally substituted with a halogen atom or a hydroxyl group, a C_1 to C_6 alkoxy group optionally substituted with a halogen atom or a hydroxyl group, a nitro group, a cyano group, or a group represented by the formula of $-(O)_p(CH_2)_mC(O)OR^3$ (wherein R^3 is a hydrogen atom or a C_1 to C_6 alkyl group, m is an integer of 0 to 2, and p is 0 or 1).

10. The compound according to any of claims 1 to 8 or a pharmaceutically acceptable salt thereof, wherein A is a heteroaryl group that is mono-substituted with a halogen atom, a C_1 to C_6 alkyl group, or a C_1 to C_6 hydroxyalkyl group.

11. The compound according to any of claims 1 to 8 or a pharmaceutically acceptable salt thereof, wherein A is a heteroaryl

group that is mono-substituted with a C₁ to C₆ alkoxy group optionally substituted with a halogen atom or a hydroxyl group, or a C₁ to C₃ alkoxy-C₁ to C₃ alkoxy group.

5 12. The compound according to any of claims 1 to 8 or a pharmaceutically acceptable salt thereof, wherein A is a heteroaryl group that is mono-substituted with a C₁ to C₆ alkylsulfanyl group that is optionally substituted with a halogen atom or a hydroxyl group.

10 13. The compound according to any of claims 9 to 12 or a pharmaceutically acceptable salt thereof, wherein A is an unsubstituted or mono-substituted five- or six-membered heteroaromatic ring, the heteroaromatic ring containing 1 to 3
15 heteroatoms selected from a sulfur atom, an oxygen atom, and a nitrogen atom, one of which is a nitrogen atom adjacent to a ring-connecting atom.

14. The compound according to any of claims 9 to 12 or a
20 pharmaceutically acceptable salt thereof, wherein A is an unsubstituted or mono-substituted fused heterocycle having a five- or six-membered heteroaromatic ring, the heteroaromatic ring containing 1 to 3 heteroatoms selected from a sulfur atom, an oxygen
25 atom, and a nitrogen atom, one of the heteroatoms being a nitrogen atom adjacent to a ring-connecting atom.

18. The compound according to claim 1 or a pharmaceutically acceptable salt thereof, selected from the group consisting of

5 (E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(ethylsulfonyl)phenyl]-N-(thiazol-2-yl)acrylamide, (E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(ethylsulfonyl)phenyl]-N-(5-methylpyrazin-2-yl)acrylamide, and (E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(ethylsulfonyl)phenyl]-N-(1-methyl-1H-pyrazol-3-yl)acrylamide.

19. The compound according to claim 1 or a pharmaceutically acceptable salt thereof, selected from the group consisting of

15 (E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(2-methoxyethylsulfonyl)phenyl]-N-(thiazol-2-yl)acrylamide, (E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(2-methoxyethylsulfonyl)phenyl]-N-(5-methylpyrazin-2-yl)acrylamide, and (E)-3-[(1 α , 3 α , 4 α)-3,4-difluorocyclopentyl]-2-[4-(2-methoxyethylsulfonyl)phenyl]-N-(1-methyl-1H-pyrazol-3-yl)acrylamide.

20. A method for treating or preventing diabetes, comprising administering the compound according to any of claims 1 to 19 or
25 a pharmaceutically acceptable salt thereof.

21 Use of a compound according to any of claims 1 to 19 or a
pharmaceutically acceptable salt thereof for manufacturing a
pharmaceutical for treatment or prevention of diabetes.

5

22. A pharmaceutical composition, comprising: the compound
according to any of claims 1 to 19, or a pharmaceutically acceptable
salt thereof; and a pharmaceutically acceptable carrier.

10 23. A compound represented by the general formula (2):

[Chemical formula 5]

(wherein R^1 and R^2 are each independently a hydrogen atom, a halogen
atom, an amino group, a hydroxyl group, a hydroxyamino group, a
15 nitro group, a cyano group, a sulfamoyl group, a C_1 to C_6 alkyl group,
a C_1 to C_6 alkoxy group, a C_1 to C_6 alkylsulfanyl group, a C_1 to C_6
alkylsulfinyl group, a C_1 to C_6 alkylsulfonyl group, or a C_1 to C_6
alkoxy- C_1 to C_6 alkylsulfonyl group).

20 24. The compound according to claim 23, wherein R^1 is a hydrogen
atom, and R^2 is a cyclopropylsulfonyl group.

25. The compound according to claim 23, wherein R^1 is a hydrogen atom, and R^2 is a methylsulfonyl group.
