

ELECTRONIC DOCUMENT PROCESSING METHOD AND APPARATUS, TERMINAL, AND STORAGE MEDIUM

Abstract

Provided in the present disclosure are an electronic document processing method and apparatus, a terminal, and a storage medium. The electronic document processing method comprises: in a current display interface, in response to a document content determination operation, determining target content from the document content of a first document (S11); and, in the current display interface, in response to a document creation operation, creating a second document having an association relationship with the first document (S12), wherein the second document is associated with the first document on the basis of the target content. The method provided in the embodiments of the present disclosure can rapidly generate a second document having an association relationship with the content in a first document, so that there is no need for the user to repeatedly perform copy and paste and association operations, thereby greatly improving the usage experience of the user.
