(54) Title: VENT DEVICES AND RELATED METHODS

Figure 1

(57) Abstract: A vent device (100, 140) for venting gas from a line of a medical device having gas to be removed has several different variations. The vent device can include an inlet (102) in communication, when in use, with an interior of the line, and an outlet (104) in communication with air outside the line or is open to the atmosphere. The inlet and the outlet define opposite ends of a flow path (106) configured to vent gas from the interior of the line out to the outside of the line, and to inhibit flow of liquid from the interior of the line out the outlet of the vent device.
