(54) Title: INSERTION SYSTEM

Fig. 1 C

(57) Abstract: An insertion system (114) comprising at least one screw coupling (118) configured for coupling at least one first element (110) and at least one second element (112) of the insertion system (114) is disclosed. The screw coupling (118) is configured such that the first element (110) and the second element (112) are assembled without rotational movement. The screw coupling (118) comprises - at least one radially flexible part (120) configured for radial movement and/or deformation when assembling the first element (110) and the second element (112), wherein the radially flexible part (120) is a part of the first element (110) or second element (112); - elastic means (122) configured for applying a force in an axial direction (124) to the screw coupling (118), wherein the elastic means (122) are preloadable in the axial direction (124) during assembly of the insertion system (114).
