

- 12) Attachment according to claim 1, characterised in that the housing (5) is the housing for a sensor strip with integrated slide channel.
- 5 13) Attachment according to claim 1, characterised in that the housing (5) is the housing for a sliding door operator.

Abstract

10 The invention relates to an attachment of end caps to housings, which are composed of profiles and employed for door specific equipment of automatic operated doors. Thereby, the end caps are invisibly snapped-in over mounting elements that were previously connected to the profiles, whereby at
15 least one of the mounting elements is simultaneously utilised as fastening for the housing.
