VERTICAL VIBRATION APPARATUS WITH HEATING FUNCTION

ABSTRACT

A vertical vibration apparatus with heating function is provided. The vertical vibration apparatus with heating function includes a housing, an actuating device, a driving control unit, and a heating device. The actuating device is disposed in the housing. The driving control unit is disposed in the housing and is electrically connected to the actuating device. The driving control unit is configured to drive and control the actuating device to vibrate. The heating device includes a heating control unit and a heating plate. The heating control unit is disposed in the housing. The heating plate is disposed on a top surface of the housing and is electrically connected to the heating control unit. Therefore, the vertical vibration apparatus with heating function of the present invention can provide a vibration function and a heating function at the same time, so as to achieve a multi-function purpose.
